

FINAL SECTION-WISE CLAUDE PROMPT SYSTEM IMPLEMENTATION + SEPARATE MANUAL VERIFICATION

Locked order: Batch 5 -> 4 -> 6 -> 7 -> 8 -> 9 -> 10 -> 11 -> 12 -> 13 -> 14 -> 15 -> 16 -> 17

CORRECTED WORKFLOW LOCK

Batch Section 1 Implementation -> Section 1 Report -> Section 1 Manual Verification -> Fix/Retest -> PASS ->
Section 2 -> ... -> Batch Integration Verification -> Next Batch

Each actual design section has its own separate Implementation Prompt and separate Manual Verification Prompt.

1. HOW TO USE THIS PDF

- Send the Master Start Prompt once at the beginning of the Claude project session.
- Then follow the locked Batch order. Inside each Batch, execute sections in the order shown in this PDF.
- For each section: send only the Section Implementation Prompt. Wait for the Section Implementation Report. Then send the matching Section Manual Verification Prompt as a separate message.
- When verification finds a defect, Claude must fix and retest before the section can be marked PASS.
- After every section in one Batch is PASS, run that Batch Integration Verification Prompt. Only then move to the next Batch.
- Do not paste the entire PDF into one Claude message. Do not send Implementation and Verification prompts together.

2. MASTER START PROMPT

PROMPT - MASTER START

You are working on the existing My Gujarat Property codebase. This project already contains substantial functionality and mixed generations of UI. Your job is not to rebuild everything blindly and not to implement an entire Batch in one response.

Use this section-wise workflow exactly:

1. Read the exact Batch specification file named in the prompt from beginning to end.
2. Inspect the matching design HTML source and identify the exact screens/states inside the named section.
3. Inspect the current code, routes, components, Server Actions, database schema, RLS, migrations, provider status and shared dependencies relevant to that section.
4. Internally create a preserve / replace / rebuild map. Preserve secure compatible backend logic, replace conflicting presentation, rebuild incorrect or missing functionality.
5. Implement only the named section plus unavoidable shared foundations required by it. Do not pre-implement later sections in a way that changes their design authority.
6. Run focused tests, lint, typecheck and production build as applicable.
7. Return the mandatory Section Implementation Report. Stop. Wait for the separate Section Manual Verification Prompt.

Design lock: the approved design source controls visible layout, responsive behavior, shells, components and states. Do not invent headers, sidebars, cards, filters or controls. If the source screen has no shell element, do not add one. Never keep old conflicting UI hidden behind CSS.

Functional lock: every visible action must work. No href="#", dead button, fake loading, fake provider success, fake count, fake analytics, fake payment or fake upload. Missing providers use the approved Setup Required or fallback state.

Security lock: enforce server-side auth, role, ownership, participant scope, RLS, input validation, safe state transitions, private documents/media, masked contacts before reveal, write-only secrets and no service-role secret exposure. Multi-write and high-risk workflows must be transactional or durably recoverable and idempotent.

Responsive lock: verify 390px first, then tablet and desktop, plus smaller/wider edge widths when the section has high-risk layouts. No accidental page horizontal scrolling, clipping, sticky overlap, bottom-nav collision or keyboard-covered actions.

Do not declare PASS merely because the build succeeds.

3. GLOBAL EXECUTION RULES

- Use the exact specification filename. If it is missing, stop and report the missing file rather than substituting an older similarly named document.
- Read the whole Batch specification for context, but implement only the named section until its separate verification cycle passes.
- Use the actual design HTML and exact section screens/states as visible authority.
- Current code is evidence, not design authority. Preserve secure compatible backend logic; remove old conflicting presentation.
- No final completion based only on code reading. Browser behavior, real database writes, permissions and responsive rendering must be tested.
- Use real pagination/count queries. Never treat first 100 rows as complete data. Remove N+1 and unbounded operational/admin lists.
- Use transactions or durable recoverable orchestration for multi-write workflows. Add idempotency and stale-state protection to high-impact actions.

- Contacts remain masked until authorised reveal. Private documents/media never use public URLs. Secrets are write-only and never returned to Browser.
- Provider missing or error states must be honest: Setup Required, skipped/logged, address/list fallback or dash according to the specification.
- Financial truth comes from trusted server/provider verification. No fake Payment, Subscription, Invoice, Refund or wallet state.
- All required controls work. No href="#", empty click handler or permanent Coming Soon for a required screen.
- After every section: Implementation Prompt -> implementation report -> separate Manual Verification Prompt -> fix -> retest -> PASS -> next section.

4. SECTION REPORT FORMATS

SECTION IMPLEMENTATION REPORT FORMAT

```
SECTION IMPLEMENTATION REPORT
- Batch / Section:
- Exact specification file read:
- Exact design source/targets inspected:
- Current code inspected:
- Preserve items:
- Replace items:
- Rebuild/new items:
- Files changed:
- Database migrations/RLS changes:
- Provider dependencies and honest states:
- Tests run and results:
- Lint result:
- Typecheck result:
- Production build result:
- Known remaining issues:
- Section status: IMPLEMENTED / PARTIAL / BLOCKED
```

SECTION MANUAL VERIFICATION REPORT FORMAT

```
SECTION MANUAL VERIFICATION REPORT
- Batch / Section:
- Routes/screens tested:
- Desktop result:
- Tablet result:
- 390px mobile result:
- Loading/empty/error/setup states tested:
- Functional actions tested:
- Permission/RLS/privacy tests:
- Concurrency/idempotency tests:
- Provider-state tests:
- Bugs found:
- Fixes applied:
- Retest results:
- Lint/typecheck/build after fixes:
- Remaining blockers:
- Final section status: PASS / FAIL / BLOCKED
```

6. COMPLETE SECTION EXECUTION MAP

Phase 01 - Design Batch 5: POSTING WIZARDS AND UNIT INVENTORY

- S1: Post Property Wizard - Owner/Broker - 9 steps
- S2: Post Project Wizard - Builder - 10 steps
- S3: Post Requirement Wizard - 7 steps
- S4: Builder Unit Inventory Management

Phase 02 - Design Batch 4: DETAIL PAGES AND PUBLIC PROFILES

- S1: Property Detail and Unavailable Property state
- S2: Project Detail
- S3: Requirement Detail - scoped visibility
- S4: Broker Public Profile
- S5: Builder Microsite
- S6: Owner Public-Safe Profile
- S7: Claim Profile Flow
- S8: Report Content Flow
- S9: Fullscreen Gallery
- S10: Comparison Page

Phase 03 - Design Batch 6: OWNER DASHBOARD

- S1: Overview / Dashboard Home - desktop, skeleton, mobile and drawer
- S2: My Properties - list, actions, delete dialog, mobile and empty state
- S3: My Requirements - desktop, mobile and empty state
- S4: Leads List - desktop table and mobile cards
- S5: Lead Detail - desktop 480px drawer and mobile full page
- S6: Messages - Thread List and Thread Detail
- S7: Site Visits - list, reject confirmation and mobile detail
- S8: Saved Properties, Saved Searches and Recently Viewed

- S9: Analytics - populated, insufficient data and Setup Required states
- S10: Billing, Invoices, Invoice Detail and Pricing/Upgrade
- S11: Verification - upload, timeline, rejection and resubmit
- S12: Profile Edit and Notifications Center
- S13: Support / Help and Settings
- S14: Role Change Request, Data Export and Delete Request

Phase 04 - Design Batch 7: BROKER DASHBOARD

- S1: Broker Overview / Dashboard Home
- S2: My Properties, Wizard Entry and My Requirements
- S3: Requirement Feed
- S4: Proposals - Sent List, Detail and Send Form
- S5: Leads / CRM List View
- S6: Leads / CRM Kanban View
- S7: Lead Detail - CRM drawer/mobile page
- S8: Messages, Site Visits and Saved - shared modules in Broker shell
- S9: Broker Analytics - Conversion Funnel and Listing Ranking
- S10: Billing, Invoices and Broker Verification
- S11: Broker Profile, Notifications, Support and Settings

Phase 05 - Design Batch 8: BUILDER DASHBOARD

- S1: Builder Overview / Dashboard Home
- S2: My Projects, Wizard Entry and Reapproval Banner
- S3: Unit Inventory - desktop, mobile and Unit Edit
- S4: Leads, Requirement Feed, Proposals, Messages and Site Visits
- S5: Agents / Team, Invite and Permissions Editor
- S6: Ads / Promotions - list, create wizard, detail and analytics
- S7: Project Analytics, Billing and Invoices
- S8: RERA Proof Upload, Company Microsite Edit and Construction Progress
- S9: Builder Notifications, Support and Settings

Phase 06 - Design Batch 9: SHARED DETAIL VIEWS

- S1: Lead Full Detail - desktop and mobile
- S2: Notes, Follow-up Reminder, Closed/Lost Reason and Duplicate Detection
- S3: Contact Reveal Flow - 3 steps
- S4: Proposal Full Detail with Embedded Thread
- S5: Messages - searchable list, full thread and report flow
- S6: Site Visits - request, respond, reminders, feedback and dispute

Phase 07 - Design Batch 10: BILLING AND PAYMENTS

- S1: Public Pricing Page
- S2: In-Dashboard Billing
- S3: Payment Flow - Checkout to trusted Success/Failure
- S4: Invoices
- S5: Refunds, GST Settings and Manual Activation

Phase 08 - Design Batch 11: ADMIN MANAGEMENT AND MODERATION

- S1: Admin Dashboard Overview - role aware
- S2: User Management and Role Change Reviews
- S3: Staff Management, Invite, Permissions and Activity
- S4: Moderation Queues and Review Screens
- S5: Verification Requests and Support Tickets

Phase 09 - Design Batch 12: ADMIN BILLING AND PAYMENTS

- S1: Subscriptions
- S2: Payments and Webhook Events
- S3: Refunds, Credit Notes and Manual Activation
- S4: Plans and Coupons Administration
- S5: Trial Campaigns

Phase 10 - Design Batch 13: ADMIN ADS, NOTIFICATIONS AND SYSTEM

- S1: Ads Admin - queue, review, active/expired and fraud review
- S2: Notification Admin - templates, editor, logs and defaults
- S3: Provider Status Dashboard and Provider Detail/Test
- S4: Feature Flags - list and toggle confirmation
- S5: Maintenance Mode control and public maintenance page
- S6: System Health and Dead-Letter Queue

Phase 11 - Design Batch 14: ADMIN CMS, SEO AND LOCATIONS

- S1: Content Editing System - CMS, Blog and Legal
- S2: SEO Settings, Redirects and Sitemap
- S3: Location Hierarchy and Multilingual Location Editor
- S4: Missing Translation Tracker

Phase 12 - Design Batch 15: ADMIN AUDIT, SECURITY AND REPORTS

- S1: Audit Logs Viewer - append only
- S2: Security Events Dashboard
- S3: Reports/Fraud Queue and Report Detail
- S4: Special Reviews - duplicate Lead, Reveal logs, Message report and Visit dispute
- S5: Business Metrics and Export Management
- S6: Bulk Action Preview and Maker-Checker Queue

Phase 13 - Design Batch 16: PUBLIC CONTENT PAGES

- S1: About and Contact
- S2: Help Center and Safety Guidelines
- S3: Shared Legal Reader and 11 Legal Policies
- S4: Cookie Preference Manager
- S5: Blog Listing and Blog Post
- S6: Support Tickets - Guest Request and My Tickets/Thread

Phase 14 - Design Batch 17: ADVANCED PWA, LOCALIZATION AND TOOLS

- S1: PWA Install Prompt and Offline Banner
- S2: Language Selector, Theme and Transliteration-Tolerant Search
- S3: EMI Calculator, Gujarat Stamp Duty Calculator and Land Unit Converter
- S4: Comparison - Tray and Full Table
- S5: Analytics Consent, PWA Update and Accessibility Quick Settings
- S6: Final Cross-Batch Consistency Checklist and Production UX QA

PHASE 01 - DESIGN BATCH 5: POSTING WIZARDS AND UNIT INVENTORY

SPECIFICATION: BATCH_05_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md

DESIGN SOURCE: Batch 5 - Posting Wizards (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 5 - Section 01: Post Property Wizard - Owner/Broker - 9 steps

B5-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 5 - SECTION S1: Post Property Wizard - Owner/Broker - 9 steps

Work only on this section now. Read the full specification file

`BATCH\_05\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 5 - Posting Wizards (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement the exact 9-step Property Wizard, shared desktop/mobile wizard shell, Step X of 9 progress, sticky footer, Back, Save Draft and Continue behavior.
2. Implement true partial Draft persistence, debounced autosave, save state, exact resume step, My Listings Draft resume card and Start New behavior without deleting existing Drafts.
3. Implement type-aware purpose/category/property-type fields, Price/Area validation summary, canonical Gujarat Location autosuggest, Map Pin/current-location fallback, amenity groups and full contact-preference step.
4. Implement real media upload: min photo rule, MIME/size validation, progress, retry, remove, reorder, Cover, crop and provider Setup Required honesty.
5. Implement exact Batch 4 Property Detail Preview in private preview mode, section Edit links, plan gate, idempotent Submit, moderation state and Submitted screen.
6. Implement approved Listing edit reapproval confirmation and revision/state behavior without silently mutating live public data.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B5-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 5 - SECTION S1: Post Property Wizard - Owner/Broker - 9 steps

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_05\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 5 - Posting Wizards (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Create a Draft from early steps, refresh, reopen and verify exact field values and resume step.
2. Force autosave race, validation errors, upload failure, provider missing, plan limit and double Submit; verify no data loss or duplicate side effects.
3. Compare every Property Wizard step and state against Batch 5 at desktop, tablet and 390px mobile.

4. Test Owner and Broker access, wrong-role denial, cross-user Draft denial and private media authorization.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 5 - Section 02: Post Project Wizard - Builder - 10 steps

B5-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 5 - SECTION S2: Post Project Wizard - Builder - 10 steps

Work only on this section now. Read the full specification file

`BATCH\_05\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 5 - Posting Wizards (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement the exact 10-step Project Wizard using the same shared Batch 5 shell/progress/footer as Property and Requirement.
2. Use authenticated Builder profile for Developer identity; implement Project type, RERA syntax status, RERA pending state and server-enforced publication gate with explicit audited Admin exception.
3. Use shared canonical Location widget, Nearby Landmark chips and structured Wing/Tower/Floor/Units configuration with deterministic, idempotent Unit generation.
4. Implement complete Project amenities, launch/possession dates, truthful construction percentage and milestone foundation shared with Builder Dashboard progress updates.
5. Implement Project media: Brochure PDF kept as PDF, Floor Plans, Video URL and separate 360 Tour link with safe provider validation and honest missing states.
6. Implement verified contact/preferred time, exact Batch 4 Project Preview, plan gate, duplicate-submit protection, Pending RERA Check success state and approved-project reapproval/revision consistency.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B5-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 5 - SECTION S2: Post Project Wizard - Builder - 10 steps

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_05\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 5 - Posting Wizards (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Run all 10 steps on desktop/tablet/mobile and verify shared shell consistency with Property Wizard.
2. Test invalid/valid RERA format, pending RERA, blocked Admin approval without verification, authorised exception with reason and audit.
3. Generate Units twice and prove no duplicates; change structure after inventory and verify impact safety.
4. Upload Brochure/Floor Plan fixtures, test wrong MIME/oversize/private access, Video/Tour invalid URLs and provider missing states.
5. Double Submit and concurrent quota tests must produce one valid submission and correct usage accounting.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 5 - Section 03: Post Requirement Wizard - 7 steps

B5-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 5 - SECTION S3: Post Requirement Wizard - 7 steps

Work only on this section now. Read the full specification file

`BATCH\_05\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 5 - Posting Wizards (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement the exact 7-step Requirement Wizard using the shared Batch 5 shell, progress, sticky footer, Save Draft, autosave and exact resume behavior.
2. Implement Looking For, purpose/category logic, structured multi-City Location preference with canonical IDs, maximum five Localities and Missing Location connection.
3. Implement purpose-aware Budget/Rent ranges, Loan Pre-approved, BHK range/multi-choice semantics including 4+, Area range and must-have amenities that feed the matching engine.
4. Implement Timeline, verified contact/preferred time and broker contact preference: In-app proposals only vs Calls OK, enforced by privacy rules.
5. Implement private Requirement Preview, display ID, honest Pending vs Live state, moderation, matching visibility, duplicate/spam protection and plan gate.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.

6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
 7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.
- At the end return exactly the Section Implementation Report format from this PDF, then stop.

B5-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 5 - SECTION S3: Post Requirement Wizard - 7 steps

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_05\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 5 - Posting Wizards (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test multiple purposes/categories and verify irrelevant hidden fields are not persisted into matching.
2. Add Locations across Cities, attempt sixth Location, duplicate Location and missing Location request.
3. Test Budget min/max, BHK 4+ semantics, contact preference enforcement and Guest/public data leakage.
4. Verify Pending after Submit, Live only after approval, restricted audience and no public sitemap/index leak.
5. Run Owner/Broker allowed access and Builder/wrong-role behavior according to canonical policy.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.

8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 5 - Section 04: Builder Unit Inventory Management

B5-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 5 - SECTION S4: Builder Unit Inventory Management

Work only on this section now. Read the full specification file

`BATCH\_05\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 5 - Posting Wizards (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement real Project -> Tower/Wing -> Floor -> Unit inventory data and exact desktop table with UNIT, TYPE, AREA, PRICE and STATUS.
2. Implement Wing/Tower tabs, real counts, pagination, filters where required, row selection and exact bulk actions: Mark Booked, Mark Sold and Update Price.
3. Implement conditional state transitions, confirmations, stale-state validation, bulk partial-failure summary, idempotency, status/price history and audit.
4. Implement exact mobile accordion/cards, selected count, Status action and Edit action.
5. Implement Unit Edit as desktop centered modal and mobile bottom sheet using one backend action with ownership/team-scope permission and optimistic concurrency.
6. Keep public Project availability aggregates consistent with Unit inventory without exposing buyer identity or private sales data.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.

2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B5-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 5 - SECTION S4: Builder Unit Inventory Management

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_05_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 5 - Posting Wizards (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Generate a realistic multi-Wing inventory and verify desktop table, pagination, mobile cards and counts.
2. Select multiple Units and test Booked, Sold and Price update including stale/ineligible records and double click.
3. Open Unit Edit in two sessions and verify stale update conflict.
4. Test wrong Builder/team permission and direct Unit mutation denial.
5. Verify Project public availability changes when Unit status changes and no private sales data leaks.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 5 - Integration Verification

BATCH 5 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 5: POSTING WIZARDS AND UNIT INVENTORY

Run this only after every section in Batch 5 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Post Property Wizard - Owner/Broker - 9 steps, S2 Post Project Wizard - Builder - 10 steps, S3 Post Requirement Wizard - 7 steps, S4 Builder Unit Inventory Management

MANDATORY CROSS-SECTION FLOWS:

1. Draft/Autosave/Resume across all three Wizards
2. Wizard Submit -> moderation queue
3. Project Wing setup -> Unit Inventory
4. Media/Location/Contact shared components
5. Plan gate and quota transaction safety
6. Preview compatibility with Batch 4

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 02 - DESIGN BATCH 4: DETAIL PAGES AND PUBLIC PROFILES

SPECIFICATION: BATCH_04_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md

DESIGN SOURCE: batch 4 - Detail Pages (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 4 - Section 01: Property Detail and Unavailable Property state

B4-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S1: Property Detail and Unavailable Property state

Work only on this section now. Read the full specification file

'BATCH_04_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'batch 4 - Detail Pages (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact desktop Property Detail: public shell, canonical Breadcrumb, real Gallery grid, Price/status, title/location/date, key facts, Description, Amenities, Location and Similar Properties.
2. Implement public-safe poster card, masked phone, explicit server-authorised Reveal, Enquire Now, Save, Share and Report. Full phone must not exist in initial HTML, RSC payload or Client props.
3. Implement 390px contextual Header, swipeable media carousel, Read More and sticky Call/Enquire actions with safe-area handling.
4. Implement the source-designed unavailable tombstone instead of soft 404, safe reason/date, Similar alternatives and filtered Browse All action.
5. Keep SEO, canonical, structured data and sitemap behavior aligned with publication/availability state.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S1: Property Detail and Unavailable Property state

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_04_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'batch 4 - Detail Pages (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Inspect initial HTML/RSC/Network before Reveal and prove full number is absent.
2. Test Guest auth return intent, Reveal, Call, Enquire duplicate protection, Save persistence, Share fallback and Report entry.
3. Mark a Property Sold/Unavailable and verify tombstone, safe data and alternatives instead of 404.
4. Compare desktop/tablet/390 layouts, sticky CTA, media count, text wrapping and map fallback.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.

2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 02: Project Detail

B4-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S2: Project Detail

Work only on this section now. Read the full specification file

`BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `batch 4 - Detail Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Project hero, real Builder identity, price range, possession and truthful RERA Registered vs RERA Verified distinction.
2. Implement all tabs: Overview, Floor Plans, Amenities, Location, Gallery, Video and 360 Tour.
3. Use real Unit Inventory aggregates/configurations and real construction milestones; remove synthetic status-to-percentage presentation.
4. Implement Video and 360 honest Setup Required states, secure provider embeds, real Gallery, Location fallback and Similar Projects.
5. Implement Project enquiry configuration selection, Site Visit connection, real Brochure PDF View and Builder mini card with real project count/founded data.
6. Implement mobile contextual Header and privacy-safe Call/Enquire sticky actions.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S2: Project Detail

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `batch 4 - Detail Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test all tabs, real RERA semantics, Unit availability, milestones and Similar Projects.
2. Verify Video/Tour active and missing-provider states, Brochure remains PDF and invalid embed URLs are rejected.
3. Submit enquiry with selected configuration and request Site Visit; verify context preserved.
4. Inspect initial payload for phone leakage and test mobile sticky actions.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 03: Requirement Detail - scoped visibility

B4-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S3: Requirement Detail - scoped visibility

Work only on this section now. Read the full specification file

`BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `batch 4 - Detail Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement full Requirement Detail for eligible Owner/Broker/Builder audience and locked Guest teaser.
2. Show display ID, status, type, Budget, Locations, Timeline, Description and masked requester identity.
3. Implement Login/Register return intent, honest authenticated-but-unauthorised state and no private data in Guest payload.
4. Connect Send Proposal to the shared Proposal system with Requirement context, eligible Listing selection and duplicate protection.
5. Keep restricted Requirement Detail Noindex and excluded from public Sitemap.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S3: Requirement Detail - scoped visibility

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `batch 4 - Detail Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Guest teaser payload, then login return, Owner/Broker/Builder access and unauthorised states.
2. Verify requester name/contact remain masked until Proposal/communication policy permits.
3. Send Proposal twice and prove duplicate protection and correct Requirement context.
4. Check robots/meta/sitemap and direct API leakage.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 04: Broker Public Profile

B4-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S4: Broker Public Profile

Work only on this section now. Read the full specification file

`BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `batch 4 - Detail Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Broker public route and profile header with real name, agency, years active, service areas, platform tenure and exact active Listing count.
2. Implement Contact Broker with explicit privacy-safe auth/reveal flow; no initial full number.
3. Implement real active Listings with pagination and Reviews Coming Soon state without fake stars/counts.
4. Place Report Profile in subtle overflow and keep SEO metadata public-safe and truthful.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S4: Broker Public Profile

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `batch 4 - Detail Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Verify exact active count beyond one page, service areas, tenure and Listing pagination.
2. Inspect payload for phone leakage and test Contact Broker from Guest and authenticated eligible user.
3. Verify no fake Review data and Report Profile opens correct flow.
4. Test mobile profile hierarchy and SEO/canonical.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 05: Builder Microsite

B4-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S5: Builder Microsite

Work only on this section now. Read the full specification file

`BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `batch 4 - Detail Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Builder public microsite with real Company identity, RERA information, Founded year, HQ City and delivered-project count.
2. Implement Contact Builder with privacy-safe auth/reveal flow.
3. Implement Active Projects, Completed and About tabs with exact real counts and approved public content.
4. Show Claim CTA only for genuinely claimable unclaimed profile and hide for claimed profile.
5. Use truthful SEO metadata without unsupported rankings or claims.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S5: Builder Microsite

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_04_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'batch 4 - Detail Pages (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Verify RERA, founded/HQ/delivered counts and tab counts against database.
2. Test Active/Completed classification, About content and Project navigation.
3. Inspect initial contact payload, test Contact Builder and claimable vs claimed CTA visibility.
4. Check desktop/mobile visual match and SEO.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 06: Owner Public-Safe Profile

B4-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S6: Owner Public-Safe Profile

Work only on this section now. Read the full specification file

'BATCH_04_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'batch 4 - Detail Pages (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement minimal Owner public-safe profile with initials/avatar, safe name, Owner label, exact active Listing count and Member Since.
2. Enforce privacy-level gate and safe unavailable behavior for private Owner profile.
3. Never expose phone, email or private address; contact only through a specific Listing enquiry.
4. Use stable safe public route/slug and public Listing data only where source permits.
5. Align indexing with privacy visibility.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S6: Owner Public-Safe Profile

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_04_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'batch 4 - Detail Pages (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Open public/semi-public Owner profile and inspect HTML/API for phone/email/address leakage.
2. Open private Owner route and verify safe not-found/no metadata leak.
3. Verify exact active Listing count and Member Since source.
4. Test any Listing navigation/contact path and SEO privacy.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 07: Claim Profile Flow

B4-S7A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S7: Claim Profile Flow

Work only on this section now. Read the full specification file

'BATCH_04_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'batch 4 - Detail Pages (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement unclaimed-profile Claim CTA, auth return intent and exact Claim modal/sheet.
2. Implement role selection, required ownership proof upload, PDF/JPG, max 10 MB, private storage and server validation.
3. Prevent duplicate pending Claims and enforce claimability/ownership rules.
4. Create Claim Request, private proof relation, Admin Claim Review queue connection, Notifications and Audit.
5. Handle concurrent competing Claims transactionally at final approval.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S7B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S7: Claim Profile Flow

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `batch 4 - Detail Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Guest -> auth -> return -> Claim flow.
2. Test valid PDF/JPG, oversize, wrong MIME, spoofed file and anonymous proof access denial.
3. Submit duplicate pending Claim and concurrent competing Claims.
4. Verify Admin queue, proof access permission, decision path, Notification and Audit.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 08: Report Content Flow

B4-S8A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S8: Report Content Flow

Work only on this section now. Read the full specification file

`BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `batch 4 - Detail Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement context-sensitive Report Listing/Profile desktop modal and mobile bottom sheet with exact reason choices and Details field.
2. Implement real Guest reporting path with server-side 3 reports/day limit, privacy-safe anonymous identity and no fake Profile rows.
3. Preserve authenticated duplicate pending protection, rate limits, target validation and moderation persistence.
4. Connect Reports to Batch 15 Reports/Fraud queue and use real success/error states.
5. Implement focus trap, Escape/outside behavior and mobile safe-area handling.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.

6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
 7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.
- At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S8B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S8: Report Content Flow

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `batch 4 - Detail Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Submit Guest reports 1-3 and verify report 4 is blocked server-side with only three rows persisted.
2. Test authenticated duplicate pending report, wrong target/type and self-report policy.
3. Verify desktop modal, mobile sheet, focus handling and failure state.
4. Confirm Batch 15 queue receives safe context without private leakage.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 09: Fullscreen Gallery

B4-S9A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S9: Fullscreen Gallery

Work only on this section now. Read the full specification file

`BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `batch 4 - Detail Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement real media-backed full-screen Gallery with count, caption, previous/next, keyboard hints and desktop thumbnail strip.
2. Implement mobile full-screen swipe and dot indicators without thumbnail strip.
3. Use real captions/thumbnails, adjacent preloading, per-image failure handling, focus trap, focus restore and body scroll lock.
4. Authorise media by owning public entity and prevent arbitrary private/Draft media access.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.

5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
 6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
 7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.
- At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S9B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S9: Fullscreen Gallery

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `batch 4 - Detail Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test keyboard Left/Right/Escape, buttons, thumbnail clicks, mobile swipe and dots.
2. Force one image failure and verify Gallery remains usable.
3. Open arbitrary media from another private/Draft entity and verify denial.
4. Test portrait/landscape and focus restoration.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Section 10: Comparison Page

B4-S10A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 4 - SECTION S10: Comparison Page

Work only on this section now. Read the full specification file

`BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `batch 4 - Detail Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Batch 4 comparison structure with sticky Compare header, selected Property columns and Add Another from Saved/Search.
2. Implement exact rows: Price/sq ft, Carpet Area, Floor, Furnishing, Facing and Status with current public data and dash for missing values.
3. Implement per-item Enquire, unavailable-item state and safe revalidation of stored selection IDs.
4. Implement mobile internal horizontal scroll with pinned specification column and no page-level overflow.
5. Remain compatible with Batch 17 final max-4 Comparison authority and keep route Noindex.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.

3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
 4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
 5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
 6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
 7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.
- At the end return exactly the Section Implementation Report format from this PDF, then stop.

B4-S10B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 4 - SECTION S10: Comparison Page

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_04\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `batch 4 - Detail Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Add items through Search/Saved, navigate/paginate and verify persistence.
2. Change/remove a Property after selection and verify current-data/unavailable behavior with no hidden data leak.
3. Test per-item Enquire routes to the correct Property.
4. Verify mobile pinned column, internal-only overflow and Noindex.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 4 - Integration Verification

BATCH 4 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 4: DETAIL PAGES AND PUBLIC PROFILES

Run this only after every section in Batch 4 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Property Detail and Unavailable Property state, S2 Project Detail, S3 Requirement Detail - scoped visibility, S4 Broker Public Profile, S5 Builder Microsite, S6 Owner Public-Safe Profile, S7 Claim Profile Flow, S8 Report Content Flow, S9 Fullscreen Gallery, S10 Comparison Page

MANDATORY CROSS-SECTION FLOWS:

1. Search -> Detail -> Auth return -> Reveal/Enquiry
2. Project Detail -> Unit availability/Site Visit
3. Requirement Detail -> Proposal
4. Public Profile -> Claim/Report
5. Gallery media authorization
6. Comparison data freshness/privacy

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections.

Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 03 - DESIGN BATCH 6: OWNER DASHBOARD

SPECIFICATION: BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md

DESIGN SOURCE: Batch 6 - Owner Dashboard (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 6 - Section 01: Overview / Dashboard Home - desktop, skeleton, mobile and drawer

B6-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S1: Overview / Dashboard Home - desktop, skeleton, mobile and drawer

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Owner shell: 240px expanded Sidebar, 64px rail, correct desktop nav order, root mobile Header, five-item bottom nav and full mobile Drawer order.
2. Make topbar Search functional and permission-scoped; centralise shell counts, unread Notifications, User identity and City so badges do not disappear across pages.
3. Implement timezone-correct greeting, real Active Listings, Pending Review, New Leads This Week, Not Contacted, Scheduled Visits and Plan Usage semantics.
4. Implement Overview skeleton state and bounded real Recent Leads table/cards with View All.
5. Remove disabled required modules and dead links.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S1: Overview / Dashboard Home - desktop, skeleton, mobile and drawer

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 6 - Owner Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test desktop, tablet and 390px root shell, Sidebar widths, Drawer focus/outside/Escape and bottom nav.
2. Create/change data and verify all four stat values/helpers change using correct definitions.
3. Test Search result scope, badges on multiple subpages, Notification count and timezone greeting.
4. Force partial query failure and verify honest state rather than fake zero.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 02: My Properties - list, actions, delete dialog, mobile and empty state

B6-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S2: My Properties - list, actions, delete dialog, mobile and empty state

Work only on this section now. Read the full specification file `'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md'` for context and inspect the exact section screens/states in `'Batch 6 - Owner Dashboard (Standalone).html'`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement server-side status filtering, complete aggregate counts and pagination; remove first-100-as-complete logic.
2. Implement exact rows/cards, real cover media, Price/Location/Lead counts, expiry/review/paused helpers and Draft Resume integration.
3. Implement state-aware View, Edit/Reapproval, Pause, Resume, Relist and Delete actions with private Pending preview.
4. Implement truthful Delete confirmation consistent with soft-delete/retention policy, conditional transitions and idempotency.
5. Implement mobile contextual Header, status tabs and state-specific overflow menu plus loading/empty/error/Retry.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S2: My Properties - list, actions, delete dialog, mobile and empty state

Do not trust the implementation report as proof. Open the running application and manually verify this section against `'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md'` and `'Batch 6 - Owner Dashboard (Standalone).html'`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test with more than 100 Listings, all status tabs/counts and pagination.

2. Test each state action, stale/double action, pending private View, Draft Resume and published Edit/Reapproval.
3. Verify Delete copy vs retained Lead/audit behavior and no broken references.
4. Compare desktop/mobile, overflow close behavior and error Retry.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 03: My Requirements - desktop, mobile and empty state

B6-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S3: My Requirements - desktop, mobile and empty state

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement scalable Requirement list with real Active/Closed states, exact Proposal counts and multi-Locality/timeline summary.
2. Use real closed timestamp/status event, not generic updated_at.
3. Implement View Proposals, Edit, Close and Reopen with entitlement, expiry, duplicate and moderation validation.
4. Preserve Proposal history when closed and stop/allow new Proposals according to policy.
5. Implement pagination, mobile cards, empty/error/Retry states.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S3: My Requirements - desktop, mobile and empty state

Do not trust the implementation report as proof. Open the running application and manually verify this section against

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 6 - Owner Dashboard (Standalone).html'. Use

real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Active -> Close -> Closed label/date -> Proposal behavior -> Reopen.
2. Verify Proposal counts and multi-Locality display against data.
3. Test Reopen when expired/limit-exceeded and double click.
4. Test large dataset pagination and mobile/empty/error states.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 04: Leads List - desktop table and mobile cards

B6-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S4: Leads List - desktop table and mobile cards

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement canonical Owner bucket filters All/New/Contacted/Visited/Closed over deeper CRM stages with complete count aggregates.
2. Add server filters and pagination; remove first-100-as-complete behavior.
3. Remove Lead enrichment N+1 using batched target and Profile lookups.
4. Implement exact desktop Table, mobile Cards, loading skeleton, empty Share Listing action, safe error and functional Retry.
5. Open Lead as desktop right Drawer and mobile full page.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S4: Leads List - desktop table and mobile cards

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 6 - Owner Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test count mapping against deeper CRM stages and more than one page of Leads.
2. Profile query count/N+1 audit and performance check.
3. Force Loading/Empty/Error and verify Retry reloads real data.
4. Test desktop row -> Drawer and mobile card -> full Detail.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 05: Lead Detail - desktop 480px drawer and mobile full page

B6-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S5: Lead Detail - desktop 480px drawer and mobile full page

Work only on this section now. Read the full specification file

`BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 6 - Owner Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement desktop 480px right Drawer and mobile contextual full page using one canonical Lead data/action layer.
2. Show real source Property, received time, counterpart, privacy-safe contact/reveal state, Call and Message only when allowed.
3. Implement Owner bucket status control while preserving Batch 9 Notes, Follow-up, terminal reason, Timeline, duplicate handling and related Property.
4. Connect Schedule Site Visit and Message to the shared systems.
5. Enforce participant access and service-role boundary.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S5: Lead Detail - desktop 480px drawer and mobile full page

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 6 - Owner Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test desktop Drawer dimensions/focus/close/direct URL and mobile Back behavior.
2. Inspect payload before Reveal, then test authorised contact, Call and Message.
3. Test stage transitions, required reasons, Notes, Follow-up, duplicate banner and Site Visit scheduling.
4. Test cross-account direct URL/action denial.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 06: Messages - Thread List and Thread Detail

B6-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S6: Messages - Thread List and Thread Detail

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact mobile Thread List and dedicated Thread Detail route; desktop uses two-pane list + active Thread.
2. Show counterpart, time, preview, unread state, search/filter/archive and accurate read state.
3. Implement safety banner, day grouping, incoming/outgoing bubbles, sticky composer, send retry and paginated older Messages.
4. Remove Thread-list N+1 for unread/latest/counterpart enrichment.
5. Fix Notification and list navigation so Thread IDs open Thread Detail, never Lead Detail.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S6: Messages - Thread List and Thread Detail

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 6 - Owner Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test at least two Threads, unread/read, search, archive and dedicated route.
2. Test desktop two-pane and mobile list -> Thread -> Back.
3. Force send failure/retry, empty body, duplicate submit and pagination.
4. Inspect query pattern for N+1 and test cross-participant access denial.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 07: Site Visits - list, reject confirmation and mobile detail

B6-S7A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S7: Site Visits - list, reject confirmation and mobile detail

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Enable real Owner Site Visits route/nav with Upcoming, Past and Calendar.
2. Collect/store requested Date and Time; render requester, Property, Location, status and correct action set.
3. Implement Accept, Reschedule and Reject with confirmation and required reason where specified.
4. Implement mobile Detail, private meeting address, Map/provider fallback and Directions via approved native intent.
5. Preserve Batch 9 reminders, completion, no-show, feedback, dispute, Lead timeline and Notifications; make multi-write flows atomic or recoverable.
6. Add pagination/date filtering and batched display enrichment.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent

command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S7B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S7: Site Visits - list, reject confirmation and mobile detail

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 6 - Owner Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test requested Date/Time, Accept, Reschedule, Reject/reason and participant Notifications.
2. Test mobile Detail, address privacy, Provider missing fallback and Directions.
3. Test Upcoming/Past/Calendar, reminders, completion/no-show/feedback/dispute.
4. Audit pagination/N+1 and cross-participant denial.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 08: Saved Properties, Saved Searches and Recently Viewed

B6-S8A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S8: Saved Properties, Saved Searches and Recently Viewed

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Wire all three systems into exact Owner design: Saved Properties/Projects, Saved Searches and Recently Viewed.
2. Handle removed/unavailable entity cards honestly and allow Unsave.
3. Show real Saved Search query summary, alert cadence and actual new-match count; support open/edit preference/delete.
4. Implement real Recently Viewed order, bounded history, empty/hide behavior and Clear History.
5. Use pagination and preserve existing batched entity enrichment/RLS.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-

path tests.

7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S8B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S8: Saved Properties, Saved Searches and Recently Viewed

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 6 - Owner Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Save Property and Project, remove one entity and verify unavailable card behavior.
2. Create Saved Search, generate matching entity and verify new-match count/alert preference.
3. Visit several Listings and verify order, limit and Clear History.
4. Test own-data RLS and mobile layouts.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 09: Analytics - populated, insufficient data and Setup Required states

B6-S9A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S9: Analytics - populated, insufficient data and Setup Required states

Work only on this section now. Read the full specification file

`BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 6 - Owner Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Owner Analytics route/nav with real 14-day views chart, Listing filter and Lead Source breakdown.
2. Use real source attribution: Search results, Saved Search alerts, Shared links and approved additional sources.
3. Implement distinct Not Enough Data logic only when tracking is active but data is young/insufficient.
4. Implement Analytics Setup Required when provider is missing; never fake charts.
5. Use consent-aware tracking, Owner-only RLS and efficient aggregates rather than raw-event scans.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report,

Notification or Media systems.

6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.

7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S9B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S9: Analytics - populated, insufficient data and Setup Required states

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 6 - Owner Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test populated state with real events, Listing filter and source attribution.
2. Test provider active but insufficient data state and provider missing state.
3. Attempt analytics query for another Owner entity.
4. Inspect charts for real dates/timezone and no simulated values.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 10: Billing, Invoices, Invoice Detail and Pricing/Upgrade

B6-S10A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S10: Billing, Invoices, Invoice Detail and Pricing/Upgrade

Work only on this section now. Read the full specification file

`BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 6 - Owner Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Owner Billing presentation over Batch 10 financial truth: Trial banner, Plan, amount/cycle, renewal/status and feature-specific meters.
2. Correct Listing and Featured Slot meter semantics; do not use generic counters incorrectly.
3. Implement Invoice desktop Table -> mobile Card, pagination, View, real Print and PDF Download.
4. Implement immutable Invoice Detail snapshot with line items, taxes, totals and Billed To/GSTIN data.
5. Implement in-dashboard Free/Basic/Premium comparison from real role plans and Upgrade through Batch 10 Checkout flow.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all

sensitive payloads.

4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S10B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S10: Billing, Invoices, Invoice Detail and Pricing/Upgrade

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 6 - Owner Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Use real test-mode Subscription/Trial/Invoice data and verify countdown, renewal and meters.
2. Test Invoice list mobile transform, Detail, Print/PDF and immutable snapshot after Profile change.
3. Test Pricing current-plan badge and Upgrade flow through Checkout/Verifying/Success or Failure.
4. Inspect for fake Payment/Invoice status or provider data.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 11: Verification - upload, timeline, rejection and resubmit

B6-S11A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S11: Verification - upload, timeline, rejection and resubmit

Work only on this section now. Read the full specification file

`BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 6 - Owner Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement real private identity document upload for Aadhaar/PAN/Driving Licence, JPG/PDF max 5 MB and server-side validation.
2. Create Verification request, consent/policy version, status events and Admin Verification queue connection.
3. Implement Submitted -> Under Review -> Approved timeline and real file metadata.
4. Implement Rejected state with real review reason/date and versioned Resubmit preserving history.
5. Grant Verified badge only after actual approval and audit sensitive document access.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.

2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S11B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S11: Verification - upload, timeline, rejection and resubmit

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 6 - Owner Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test valid/invalid files, oversize, MIME spoof and anonymous/private document access.
2. Run submit -> review -> reject -> resubmit -> approve end to end.
3. Verify timeline/history and badge truth.
4. Test Owner B document access denial and Admin permission/access logging.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 12: Profile Edit and Notifications Center

B6-S12A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S12: Profile Edit and Notifications Center

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement real Profile Edit: avatar upload/crop, Full Name, Email, canonical City, Bio, verified-mobile lock, Cancel and Save.
2. Protect privileged columns so Profile update cannot alter Role, Account Status, Verification, Staff permissions or Plan state.
3. Implement Notifications full page with Today/Earlier grouping, unread styling, Mark Read, Mark All Read, pagination and deleted-target fallback.
4. Build complete notification target route map; fix Message Thread notification so Thread ID opens Thread Detail rather than

Lead Detail.

5. Keep external delivery state separate from in-app Notification state.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S12B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S12: Profile Edit and Notifications Center

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 6 - Owner Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Profile save/reload, avatar crop/upload failures and direct privilege escalation requests.
2. Create each Notification type and verify correct deep link, read state and fallback for deleted target.
3. Specifically test Message Thread Notification with Thread ID.
4. Test pagination and mobile/desktop layouts.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 13: Support / Help and Settings

B6-S13A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S13: Support / Help and Settings

Work only on this section now. Read the full specification file

`BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` for context and inspect the exact section screens/states in `Batch 6 - Owner Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement authenticated Owner Dashboard Support: FAQ accordion, Ticket categories, create form, own Ticket list, human-

readable ID, status and Thread/detail integrated with Admin Support.

2. Implement Ticket validation, rate limit, private attachments only when provider is available and own-Ticket RLS.
3. Implement Settings: New Lead channels, Site Visit reminders, Marketing Email, provider-honest delivery preferences, Show Name privacy, Light/Dark/System and language state.
4. Ensure Show Name affects Search/Detail/Profile/metadata consistently with no hidden name leak.
5. Implement Danger Zone entry with type DELETE and OTP re-verification handoff to deletion flow.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S13B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S13: Support / Help and Settings

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' and 'Batch 6 - Owner Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Create Ticket, verify Admin queue/reply/resolve and Owner Thread update; test cross-user Ticket denial.
2. Test every Settings toggle persistence across refresh/device context and Provider unavailable honesty.
3. Test Show Name off by inspecting UI, HTML, API and schema metadata.
4. Test Theme choices and Danger Zone guards.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Section 14: Role Change Request, Data Export and Delete Request

B6-S14A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 6 - SECTION S14: Role Change Request, Data Export and Delete Request

Work only on this section now. Read the full specification file

'BATCH_06_FULL_DESIGN_FUNCTIONALITY_VERIFICATION_SPEC.md' for context and inspect the exact section screens/states in 'Batch 6 - Owner Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Owner -> Broker Role Change request with impact warning, reason, one active request, Pending state and Withdraw.
2. Connect to Admin Role Change queue and transactional approval that coordinates Role, verification, Subscription migration, feature limits, Dashboard access and compatible Listing preservation.
3. Implement Data Export identity confirmation via real OTP, rate limiting, asynchronous Export job, private archive, signed expiring download and access logging.
4. Implement Account Deletion request with type DELETE, OTP reverify, 30-day grace, cancel flow and durable legal-retention-aware deletion orchestration.
5. Handle Invoice/Payment/Audit retention, Message integrity and public Listing/media cleanup honestly.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B6-S14B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 6 - SECTION S14: Role Change Request, Data Export and Delete Request

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_06\_FULL\_DESIGN\_FUNCTIONALITY\_VERIFICATION\_SPEC.md` and `Batch 6 - Owner Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Role Change submit, duplicate active request, Pending, Withdraw and Admin approval/migration.
2. Test OTP send limits, wrong/correct OTP, duplicate Export request, Processing/Ready/Expired download and foreign archive denial.
3. Test Delete guards, grace-period behavior, cancel, controlled completion and legal-retention outcomes.
4. Verify Audit and Notifications for all lifecycle steps.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 6 - Integration Verification

BATCH 6 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 6: OWNER DASHBOARD

Run this only after every section in Batch 6 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Overview / Dashboard Home - desktop, skeleton, mobile and drawer, S2 My Properties - list, actions, delete dialog, mobile and empty state, S3 My Requirements - desktop, mobile and empty state, S4 Leads List - desktop table and mobile cards, S5 Lead Detail - desktop 480px drawer and mobile full page, S6 Messages - Thread List and Thread Detail, S7 Site Visits - list, reject confirmation and mobile detail, S8 Saved Properties, Saved Searches and Recently Viewed, S9 Analytics - populated, insufficient data and Setup Required states, S10 Billing, Invoices, Invoice Detail and Pricing/Upgrade, S11 Verification - upload, timeline, rejection and resubmit, S12 Profile Edit and Notifications Center, S13 Support / Help and Settings, S14 Role Change Request, Data Export and Delete Request

MANDATORY CROSS-SECTION FLOWS:

1. Owner Overview counts -> lists
2. Property/Requirement actions -> Leads/Proposals
3. Lead -> Message -> Site Visit
4. Saved/Search/Recently Viewed
5. Analytics/Billing/Verification
6. Support/Settings/Role Change/Data export/delete

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 04 - DESIGN BATCH 7: BROKER DASHBOARD

SPECIFICATION: BATCH_DOCUMENT_04_DESIGN_BATCH_07_BROKER_DASHBOARD_FULL_SPEC.md

DESIGN SOURCE: Batch 7 - Broker Dashboard (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 7 - Section 01: Broker Overview / Dashboard Home

B7-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S1: Broker Overview / Dashboard Home

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Broker shell/navigation and role-specific Overview metrics/actions from Batch 7.
2. Use real Broker Listings, Requirements, Leads/CRM, Proposals and Plan metrics; no Owner-dashboard substitutions.
3. Implement desktop/tablet/mobile states, real badges, loading/empty/error behavior and scoped Search/Notification/Profile controls.
4. Use scalable counts and honest provider-dependent data.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S1: Broker Overview / Dashboard Home

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Verify Broker-only shell/navigation and all Overview metrics against database.
2. Test mobile Drawer/bottom nav behavior, badges across subpages and wrong-role denial.
3. Force Loading/Error and verify no fake zeros.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.

6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 02: My Properties, Wizard Entry and My Requirements

B7-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S2: My Properties, Wizard Entry and My Requirements

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Broker My Properties exact row/card design including Featured chip/state, status actions and pagination.
2. Connect Post Property and Continue Draft to Batch 5 canonical Property Wizard, preserving Broker shell and plan gates.
3. Implement My Requirements using only the intentional reused pattern, real Proposal counts/status actions and scalable data.
4. Keep active Listing/featured usage semantics consistent with Billing.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S2: My Properties, Wizard Entry and My Requirements

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Listing states/actions, Featured entitlement/exhaustion and pagination.
2. Test Continue Draft exact resume and Broker ownership.
3. Test Requirement actions/counts and mobile transforms.
4. Run cross-Broker access denial.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.

4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 03: Requirement Feed

B7-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S3: Requirement Feed

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Requirement Feed desktop/mobile with eligible approved Requirements only, filters, pagination and explainable match context.
2. Use matching engine fields from Batch 5 Requirements and Broker Property inventory; no fake match score.
3. Enforce verification/plan eligibility and requester privacy; no private contact leak.
4. Implement loading, empty and error states and entry to Send Proposal.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S3: Requirement Feed

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Create matching/nonmatching/closed/pending Requirements and verify Feed eligibility and explanations.
2. Test filters, pagination and empty/error states.
3. Inspect payload for requester private data and wrong-role access.
4. Open Send Proposal with exact Requirement context.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 04: Proposals - Sent List, Detail and Send Form

B7-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S4: Proposals - Sent List, Detail and Send Form

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Sent Proposal list with status tabs/counts, pagination and mobile transform.
2. Implement Proposal Detail with Requirement, proposed Property/Project, terms/message, status timeline and allowed actions.
3. Implement Send Proposal desktop modal/mobile sheet with eligible Listing selection, server validation, quota/plan gate and duplicate-submit/duplicate-existing protection.
4. Connect Proposal messages/thread and recipient visibility to shared Batch 9 logic.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S4: Proposals - Sent List, Detail and Send Form

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Send, double click, same Requirement+Listing duplicate, wrong Listing ownership and quota exhausted.
2. Test Sent status tabs, Detail, Withdraw/respond state and deep links.

3. Inspect participant privacy and cross-account denial.
4. Compare modal/sheet layouts.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 05: Leads / CRM List View

B7-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S5: Leads / CRM List View

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Broker CRM List with scalable search, filters, real counts, pagination and exact desktop/mobile presentation.
2. Use canonical CRM stages and safe batch enrichment without N+1.
3. Implement stage actions, assignee visibility according to Broker team model and entry to Lead Detail.
4. Provide Loading/Empty/Filtered Empty/Error/Retry states.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S5: Leads / CRM List View

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test large Lead dataset, counts, search/filter/pagination and stage updates.
2. Inspect query pattern for N+1 and stale-stage protection.
3. Test mobile cards and error Retry.
4. Run cross-Broker Lead denial.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 06: Leads / CRM Kanban View

B7-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S6: Leads / CRM Kanban View

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement desktop 1280px+ Kanban with source columns, real counts and Lead cards from the same CRM dataset.
2. Implement drag/drop or explicit move with server-validated transitions, optimistic rollback and stale-state protection.
3. Provide responsive behavior for widths below Kanban threshold without accidental overflow.
4. Keep List and Kanban views synchronized.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S6: Leads / CRM Kanban View

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and

permission failures.

MANDATORY VERIFICATION:

1. Move Leads across stages, refresh and verify persistence/timeline.
2. Test two-session stale drag/update and invalid transition.
3. Verify counts remain consistent between List and Kanban.
4. Test below-1280 responsive fallback and keyboard/accessibility alternative.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 07: Lead Detail - CRM drawer/mobile page

B7-S7A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S7: Lead Detail - CRM drawer/mobile page

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Broker CRM Lead Detail Drawer/mobile page with contact privacy, source context and Broker-specific actions.
2. Preserve Batch 9 Notes, Follow-up reminders, terminal reason, Timeline, duplicate detection, contact reveal and communication history.
3. Connect Message and Site Visit flows and stage changes to one canonical Lead record.
4. Enforce participant/ownership/team-scope access.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S7B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S7: Lead Detail - CRM drawer/mobile page

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test drawer/mobile behavior, contact reveal, Notes, reminders, terminal reason and duplicate handling.
2. Test Message and Visit transitions and timeline events.
3. Test direct URL/action denial for another Broker/team.
4. Inspect private contact payload.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 08: Messages, Site Visits and Saved - shared modules in Broker shell

B7-S8A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S8: Messages, Site Visits and Saved - shared modules in Broker shell
Work only on this section now. Read the full specification file `BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Reuse canonical shared Messages, Site Visits and Saved behavior while rendering exact Broker shell/navigation context.
2. Keep Thread search/archive/detail, Visit respond/reschedule/reminders/feedback and Saved Property/Search/Recent behavior functional.
3. Apply Broker permissions and privacy rules without cloning duplicate systems.
4. Keep pagination, N+1 fixes and provider fallbacks.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S8B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S8: Messages, Site Visits and Saved - shared modules in Broker shell

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Run a real Broker Thread, Site Visit and Saved flow end to end.
2. Verify routes preserve Broker shell and mobile navigation.
3. Test cross-role/cross-account denial and private address/contact data.
4. Check pagination/performance.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 09: Broker Analytics - Conversion Funnel and Listing Ranking

B7-S9A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S9: Broker Analytics - Conversion Funnel and Listing Ranking

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement real conversion funnel Lead -> Visit -> Close and Listing performance ranking.
2. Use documented event/state definitions and real date/filter context; no simulated chart data.
3. Implement insufficient-data and Provider Setup Required states where applicable.
4. Use Broker-owned data only and efficient aggregates.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S9B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S9: Broker Analytics - Conversion Funnel and Listing Ranking

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Create controlled Lead/Visit/Close events and verify funnel math.
2. Verify Listing ranking values against source data and tie handling.
3. Test insufficient/provider-missing states and wrong-owner denial.
4. Inspect for fake active charts.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 10: Billing, Invoices and Broker Verification

B7-S10A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S10: Billing, Invoices and Broker Verification

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Broker Plan card, feature-specific usage meters, Invoice list/detail and Batch 10 payment truth.
2. Implement Broker document Verification workflow and real status history, rejection reason and resubmit.
3. Keep private documents protected and Billing records immutable.
4. Wire Upgrade/Manage to canonical Billing flow.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S10B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S10: Billing, Invoices and Broker Verification

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 7 - Broker Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Broker plan limits/meters and test-mode checkout/invoice flow.
2. Test Verification submit-review-reject-resubmit-approve.
3. Inspect document privacy and cross-user access.
4. Compare desktop/mobile source layouts.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Section 11: Broker Profile, Notifications, Support and Settings

B7-S11A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 7 - SECTION S11: Broker Profile, Notifications, Support and Settings

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_04\_DESIGN\_BATCH\_07\_BROKER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 7 - Broker Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Broker Profile edit fields, public-profile connection, service areas, agency/business data and privacy/verification truth.
2. Implement Notifications grouping/deep links, Support Ticket system and Settings preferences in Broker shell.
3. Keep Theme/language/privacy provider-honest and persistent.
4. Ensure no dead required routes or Coming Soon placeholders remain.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B7-S11B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 7 - SECTION S11: Broker Profile, Notifications, Support and Settings

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_04_DESIGN_BATCH_07_BROKER_DASHBOARD_FULL_SPEC.md' and 'Batch 7 - Broker Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Edit Broker profile and verify public Profile update with privacy rules.
2. Test Notification target routes, Support Ticket reply lifecycle and Settings persistence.
3. Run provider-missing states and cross-account denial.
4. Check desktop/tablet/mobile visuals.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 7 - Integration Verification

BATCH 7 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 7: BROKER DASHBOARD

Run this only after every section in Batch 7 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Broker Overview / Dashboard Home, S2 My Properties, Wizard Entry and My Requirements, S3 Requirement Feed, S4 Proposals - Sent List, Detail and Send Form, S5 Leads / CRM List View, S6 Leads / CRM Kanban View, S7 Lead Detail - CRM drawer/mobile page, S8 Messages, Site Visits and Saved - shared modules in Broker shell, S9 Broker Analytics - Conversion Funnel and Listing Ranking, S10 Billing, Invoices and Broker Verification, S11 Broker Profile, Notifications, Support and Settings

MANDATORY CROSS-SECTION FLOWS:

1. Broker Listing/Draft -> Feed -> Proposal
2. CRM List/Kanban -> Lead Detail
3. Lead -> Message/Visit
4. Analytics/Billing/Verification
5. Public Profile/Settings/Support

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 05 - DESIGN BATCH 8: BUILDER DASHBOARD

SPECIFICATION: BATCH_DOCUMENT_05_DESIGN_BATCH_08_BUILDER_DASHBOARD_FULL_SPEC.md

DESIGN SOURCE: Batch 8 - Builder Dashboard (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 8 - Section 01: Builder Overview / Dashboard Home

B8-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S1: Builder Overview / Dashboard Home

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_05_DESIGN_BATCH_08_BUILDER_DASHBOARD_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 8 - Builder Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Builder shell/navigation, project/lead/site-visit/team/campaign metrics and quick actions using real data.
2. Use scalable aggregate queries, honest provider states and exact desktop/mobile layouts.
3. Keep Builder role permissions distinct from Owner/Broker.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S1: Builder Overview / Dashboard Home

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_05_DESIGN_BATCH_08_BUILDER_DASHBOARD_FULL_SPEC.md' and 'Batch 8 - Builder Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Verify every metric/action against database, shell/nav at desktop/mobile and wrong-role denial.
2. Force loading/error/provider-missing states.
3. Check badge consistency and no fake campaign metrics.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet

and mobile keyboard.

8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 02: My Projects, Wizard Entry and Reapproval Banner

B8-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S2: My Projects, Wizard Entry and Reapproval Banner

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 8 - Builder Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Projects list with real statuses/counts/pagination and exact row/card actions.
2. Connect New Project to Batch 5 Project Wizard and Continue Draft behavior.
3. Implement edit-approved Project revision/reapproval warning and version safety.
4. Keep RERA gate truth visible and no silent live mutation.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S2: My Projects, Wizard Entry and Reapproval Banner

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 8 - Builder Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Draft/Pending/Live/Need Changes/Paused states and pagination.
2. Test Wizard entry/resume, approved edit warning, revision review and public version behavior.
3. Test RERA gate and wrong Builder access.
4. Compare mobile/desktop actions.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.

6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 03: Unit Inventory - desktop, mobile and Unit Edit

B8-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S3: Unit Inventory - desktop, mobile and Unit Edit

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 8 - Builder Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Builder Inventory table, sticky header, selection/bulk actions, Wing/Floor hierarchy and real counts.
2. Implement 390px Wing -> Floor accordion cards and Unit Edit desktop modal/mobile sheet.
3. Use canonical Batch 5 Unit actions, stale-state validation, team permissions, audit and public availability aggregate sync.
4. Add pagination/filtering for large projects.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S3: Unit Inventory - desktop, mobile and Unit Edit

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 8 - Builder Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test selection/bulk actions, stale Unit edit, wrong team permission and large inventory pagination.
2. Test mobile accordion and sheet, desktop modal and no overflow.
3. Verify Project public availability aggregates.
4. Inspect audit/history.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.

4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 04: Leads, Requirement Feed, Proposals, Messages and Site Visits

B8-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S4: Leads, Requirement Feed, Proposals, Messages and Site Visits

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_05_DESIGN_BATCH_08_BUILDER_DASHBOARD_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 8 - Builder Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Builder Project Leads and Lead Detail with Assigned Agent block and safe assignment.
2. Implement Matching Requirement Feed with explainable match chip and approved/private eligibility.
3. Implement Proposal flows using shared Proposal rules and Builder Project/Unit context.
4. Reuse Messages and Site Visits with Builder shell; include Site Visit Assign to Agent where source requires.
5. Preserve privacy, pagination, N+1 fixes and shared Batch 9 deep behaviors.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S4: Leads, Requirement Feed, Proposals, Messages and Site Visits

Do not trust the implementation report as proof. Open the running application and manually verify this section against

'BATCH_DOCUMENT_05_DESIGN_BATCH_08_BUILDER_DASHBOARD_FULL_SPEC.md' and 'Batch 8 - Builder Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Lead assignment and permission denial, Requirement matching explanations and Proposal duplicate/plan gates.
2. Test Message Thread and Site Visit Assign to Agent, reschedule/feedback/dispute.
3. Inspect private contact/Requirement data leakage.
4. Verify mobile/desktop shell integration.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 05: Agents / Team, Invite and Permissions Editor

B8-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S5: Agents / Team, Invite and Permissions Editor

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 8 - Builder Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Team list desktop/mobile with real members, roles/status and Project scope.
2. Implement Invite Agent modal with secure token, expiry, duplicate prevention and real Email delivery or honest Setup Required state.
3. Implement per-agent Permission Editor using canonical modules/actions and least privilege.
4. Prevent self-escalation, unauthorized grant and stale permission overwrite; audit every change.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S5: Agents / Team, Invite and Permissions Editor

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 8 - Builder Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Invite valid/duplicate/expired/provider-missing and acceptance.
2. Test permission grant/revoke, self-escalation, grantor-beyond-own-permission and direct route denial.

3. Verify Audit records and member list status.
4. Test mobile Team cards and modal/sheet behavior.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 06: Ads / Promotions - list, create wizard, detail and analytics

B8-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S6: Ads / Promotions - list, create wizard, detail and analytics

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 8 - Builder Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Campaign list with real status, spend/period and actions.
2. Implement 7-step Create Ad Campaign Wizard and exact creative slot sizes, targeting, budget, payment/review dependencies and duplicate-submit protection.
3. Implement Campaign Detail with honest performance block and active/expired states.
4. Implement Ad Analytics Setup Required when tracking provider is missing; never fabricate impressions/clicks.
5. Connect to Batch 13 Admin Ads review and fraud systems.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S6: Ads / Promotions - list, create wizard, detail and analytics

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 8 - Builder Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and

permission failures.

MANDATORY VERIFICATION:

1. Create campaign through all steps, wrong creative size, budget validation and duplicate submit.
2. Verify payment/review/activation/expiry lifecycle and Admin queue connection.
3. Test real analytics vs Setup Required, no fake metrics.
4. Test mobile wizard and detail layouts.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 07: Project Analytics, Billing and Invoices

B8-S7A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S7: Project Analytics, Billing and Invoices

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_05_DESIGN_BATCH_08_BUILDER_DASHBOARD_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 8 - Builder Dashboard (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement real Project Analytics including sales velocity and approved project-level metrics.
2. Implement Builder Billing tier, feature-specific usage and Ad Wallet ledger, not fake balance arithmetic.
3. Implement Invoices using Batch 10 immutable Invoice truth and role-correct plans.
4. Provide insufficient-data/provider states honestly and Owner-only Project RLS.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S7B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S7: Project Analytics, Billing and Invoices

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 8 - Builder Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Verify project metrics against Unit/Lead/Sales source data.
2. Test Ad Wallet credit/debit/reconciliation and insufficient/provider states.
3. Test Builder subscription, invoices and checkout in test mode.
4. Attempt analytics/billing access across Builders.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 08: RERA Proof Upload, Company Microsite Edit and Construction Progress

B8-S8A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S8: RERA Proof Upload, Company Microsite Edit and Construction Progress

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 8 - Builder Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement per-Project RERA proof private upload and verification status connection.
2. Implement Company Microsite edit for approved public fields, About/media/contact privacy and Preview/publish behavior.
3. Implement Construction Progress updates with real milestones, percentage, dates and media; connect to Batch 4 Project Detail.
4. Use private/public media correctly and keep audit/version history.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S8B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S8: RERA Proof Upload, Company Microsite Edit and Construction Progress

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` and `Batch 8 - Builder Dashboard (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test RERA file validation/privacy/review connection.
2. Edit Microsite and verify public output, private-field protection and SEO-safe data.
3. Update milestones and verify Project Detail progress, no synthetic mapping.
4. Test wrong Project ownership and stale updates.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Section 09: Builder Notifications, Support and Settings

B8-S9A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 8 - SECTION S9: Builder Notifications, Support and Settings

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_05\_DESIGN\_BATCH\_08\_BUILDER\_DASHBOARD\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 8 - Builder Dashboard (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Builder-specific Notification routes, Support Ticket system and Settings in exact Builder shell.
2. Include team/campaign/project/RERA/lead/site-visit/billing notification targets and safe fallbacks.
3. Persist preferences and provider-honest channel settings.
4. Remove required-module placeholders/dead links.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B8-S9B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 8 - SECTION S9: Builder Notifications, Support and Settings

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_05_DESIGN_BATCH_08_BUILDER_DASHBOARD_FULL_SPEC.md' and 'Batch 8 - Builder Dashboard (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Create representative Builder notifications and test every deep link.
2. Create Support Ticket and verify Admin reply lifecycle.
3. Test Settings persistence/provider missing states and cross-account denial.
4. Check desktop/mobile layouts.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 8 - Integration Verification

BATCH 8 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 8: BUILDER DASHBOARD

Run this only after every section in Batch 8 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Builder Overview / Dashboard Home, S2 My Projects, Wizard Entry and Reapproval Banner, S3 Unit Inventory - desktop, mobile and Unit Edit, S4 Leads, Requirement Feed, Proposals, Messages and Site Visits, S5 Agents / Team, Invite and Permissions Editor, S6 Ads / Promotions - list, create wizard, detail and analytics, S7 Project Analytics, Billing and Invoices, S8 RERA Proof Upload, Company Microsite Edit and Construction Progress, S9 Builder Notifications, Support and Settings

MANDATORY CROSS-SECTION FLOWS:

1. Project Wizard -> Project list -> Units
2. Project Lead -> Assignment/Message/Visit
3. Requirement Match -> Proposal
4. Team permissions
5. Campaign -> Admin Ads
6. RERA/Microsite/Progress -> public Project Detail

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 06 - DESIGN BATCH 9: SHARED DETAIL VIEWS

SPECIFICATION: BATCH_DOCUMENT_06_DESIGN_BATCH_09_SHARED_DETAIL_VIEWS_FULL_SPEC.md

DESIGN SOURCE: Batch 9 - Shared Detail Views (Standalone) (1).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 9 - Section 01: Lead Full Detail - desktop and mobile

B9-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 9 - SECTION S1: Lead Full Detail - desktop and mobile

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_06_DESIGN_BATCH_09_SHARED_DETAIL_VIEWS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 9 - Shared Detail Views (Standalone) (1).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement complete shared Lead Detail page/presentation with identity, source, stage, contact privacy, related entity, Notes, Follow-up, Documents, communication and unified timeline.
2. Use role shell context from Owner/Broker/Builder while keeping one canonical backend/action layer.
3. Enforce participant/team permissions, pagination and safe field projections.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B9-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 9 - SECTION S1: Lead Full Detail - desktop and mobile

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_06_DESIGN_BATCH_09_SHARED_DETAIL_VIEWS_FULL_SPEC.md' and 'Batch 9 - Shared Detail Views (Standalone) (1).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Owner/Broker/Builder contexts, desktop/mobile layouts and direct access denial.
2. Inspect contact/private fields before Reveal.
3. Verify timeline ordering, related entity and all actions.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.

7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.

8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces. Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 9 - Section 02: Notes, Follow-up Reminder, Closed/Lost Reason and Duplicate Detection

B9-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 9 - SECTION S2: Notes, Follow-up Reminder, Closed/Lost Reason and Duplicate Detection

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 9 - Shared Detail Views (Standalone) (1).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Add/Edit Note desktop modal/mobile sheet with ownership/author rules.
2. Implement Follow-up scheduler with date/time/timezone, Notification job and idempotent update/cancel.
3. Require reason for Closed/Lost transitions and persist timeline event.
4. Implement duplicate Lead banner and resolution workflow without silent auto-merge.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B9-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 9 - SECTION S2: Notes, Follow-up Reminder, Closed/Lost Reason and Duplicate Detection

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` and `Batch 9 - Shared Detail Views (Standalone) (1).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Note create/edit permission, reminder create/edit/cancel/delivery and duplicate clicks.
2. Test terminal status without/with reason and stale transition.
3. Test duplicate detection false-positive dismissal and merge/escalation path.
4. Verify timeline and notifications.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 9 - Section 03: Contact Reveal Flow - 3 steps

B9-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 9 - SECTION S3: Contact Reveal Flow - 3 steps

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 9 - Shared Detail Views (Standalone) (1).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement the exact three-step Reveal flow: masked state, request/approval or eligibility decision, revealed contact state.
2. Enforce current/alternate number rules, consent/visibility, plan quota, self-reveal prevention and idempotent usage accounting.
3. Persist immutable Reveal event and timeline/audit/notification where specified.
4. Never send full number before authorised reveal.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B9-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 9 - SECTION S3: Contact Reveal Flow - 3 steps

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` and `Batch 9 - Shared Detail Views (Standalone) (1).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Inspect HTML/RSC/Network before Reveal.
2. Test allowed, denied, pending approval, repeated reveal, quota exhausted, self-reveal and concurrent requests.

3. Verify Reveal events and usage not double-counted.
4. Test mobile/desktop states.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 9 - Section 04: Proposal Full Detail with Embedded Thread

B9-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 9 - SECTION S4: Proposal Full Detail with Embedded Thread

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 9 - Shared Detail Views (Standalone) (1).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Proposal full detail: requirement context, proposed entity, commercial/message content, status, actions and embedded communication Thread.
2. Enforce participant visibility and status transitions, withdraw/respond rules and stale-state protection.
3. Use one Message system and preserve Proposal context in timeline/deep links.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B9-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 9 - SECTION S4: Proposal Full Detail with Embedded Thread

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` and `Batch 9 - Shared Detail Views (Standalone) (1).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test sender/recipient views, each status transition and invalid/stale action.
2. Test embedded Thread send/read and Proposal context.
3. Test nonparticipant access denial and mobile layout.
4. Verify no duplicate Proposal records.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 9 - Section 05: Messages - searchable list, full thread and report flow

B9-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 9 - SECTION S5: Messages - searchable list, full thread and report flow

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_06_DESIGN_BATCH_09_SHARED_DETAIL_VIEWS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 9 - Shared Detail Views (Standalone) (1).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement searchable/filterable Thread list, participant-specific archive and exact mobile states.
2. Implement full Thread Detail with pagination, attachments when provider available, typing indicator expiry, read state and safe composer.
3. Implement Report Thread modal with reason and safe context snapshot sent to Batch 15 review.
4. Avoid N+1 and protect private Message content.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B9-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 9 - SECTION S5: Messages - searchable list, full thread and report flow

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_06_DESIGN_BATCH_09_SHARED_DETAIL_VIEWS_FULL_SPEC.md' and 'Batch 9 - Shared Detail Views

(Standalone) (1).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test search/filter/archive, Message pagination, read states and send retry.
2. Test attachment provider active/missing, typing expiry and participant denial.
3. Report a Thread and verify safe review context without raw sensitive payload leak.
4. Audit query performance.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 9 - Section 06: Site Visits - request, respond, reminders, feedback and dispute

B9-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 9 - SECTION S6: Site Visits - request, respond, reminders, feedback and dispute

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 9 - Shared Detail Views (Standalone) (1).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Visit Request form from Lead context with date/time/timezone, Property/Project context and validation.
2. Implement Accept, Reject with reason, Reschedule, reminders and participant Notifications.
3. Implement post-Visit feedback, completion/no-show outcomes and dispute trigger/resolution connection to Batch 15.
4. Keep Lead timeline and CRM stage consistent through transactional/idempotent workflows.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B9-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 9 - SECTION S6: Site Visits - request, respond, reminders, feedback and

dispute

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_06\_DESIGN\_BATCH\_09\_SHARED\_DETAIL\_VIEWS\_FULL\_SPEC.md` and `Batch 9 - Shared Detail Views (Standalone) (1).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Request -> Accept, Request -> Reject, Reschedule and reminder delivery.
2. Test completion/no-show, feedback and conflicting participant outcomes -> Disputed.
3. Verify Lead timeline/stage and participant privacy.
4. Test double/stale responses and cross-participant denial.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 9 - Integration Verification

BATCH 9 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 9: SHARED DETAIL VIEWS

Run this only after every section in Batch 9 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Lead Full Detail - desktop and mobile, S2 Notes, Follow-up Reminder, Closed/Lost Reason and Duplicate Detection, S3 Contact Reveal Flow - 3 steps, S4 Proposal Full Detail with Embedded Thread, S5 Messages - searchable list, full thread and report flow, S6 Site Visits - request, respond, reminders, feedback and dispute

MANDATORY CROSS-SECTION FLOWS:

1. Lead detail timeline across Notes/Reminder/Status/Reveal
2. Proposal + embedded Thread
3. Message report -> Admin review
4. Visit request/respond/reminder/feedback/dispute

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 07 - DESIGN BATCH 10: BILLING AND PAYMENTS

SPECIFICATION: BATCH_DOCUMENT_07_DESIGN_BATCH_10_BILLING_PAYMENTS_FULL_SPEC.md

DESIGN SOURCE: Batch 10 - Billing & Payments (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 10 - Section 01: Public Pricing Page

B10-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 10 - SECTION S1: Public Pricing Page

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 10 - Billing & Payments (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact public Pricing cards and role-aware plans from real Plan data, including features, prices, cycle, current/popular state and Guest/auth behavior.
2. Use one Plan authority shared with Admin Plan editor and Dashboard Pricing preview.
3. Do not hard-code unavailable features or fake discounts.
4. Preserve exact return-to-selected-plan Auth intent.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B10-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 10 - SECTION S1: Public Pricing Page

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 10 - Billing & Payments (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Guest and logged-in role plan visibility, current/popular states and selected-plan return after auth.
2. Change Plan data in Admin fixture and verify Pricing output.
3. Test free/paid eligibility and no client-side price authority.
4. Check mobile/desktop cards and SEO.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.

5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.

6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.

7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.

8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 10 - Section 02: In-Dashboard Billing

B10-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 10 - SECTION S2: In-Dashboard Billing

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 10 - Billing & Payments (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement role shell Billing overview with Subscription, Trial, correct feature-specific usage, renewal/cancel state, payments/invoices entry points and Upgrade/Manage actions.
2. Use real Subscription/Trial/usage records and immutable financial history.
3. Keep Owner/Broker/Builder presentation differences while sharing one billing engine.
4. Never derive active-listing/team-seat/ad-credit meters from a generic counter incorrectly.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B10-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 10 - SECTION S2: In-Dashboard Billing

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 10 - Billing & Payments (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test all three roles with free/trial/active/cancelled/expired states.
2. Verify each meter against authoritative source data.
3. Test cancel/manage/upgrade actions and missing provider state.
4. Inspect cross-user Billing RLS.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.

2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 10 - Section 03: Payment Flow - Checkout to trusted Success/Failure

B10-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 10 - SECTION S3: Payment Flow - Checkout to trusted Success/Failure

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 10 - Billing & Payments (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement linear Pricing -> Auth return -> Checkout Summary -> provider order -> payment UI -> Verifying -> trusted Success/Failed/Pending flow.
2. Use server-side Plan/amount/currency authority, Coupon validation, GST data and duplicate pending-order guard.
3. Verify raw-body webhook signature, event shape, amount/currency, capture semantics and idempotency; never treat authorized as captured when capture is required.
4. Coordinate Payment, Subscription activation, Invoice creation, Coupon/Add-on usage and recovery durably.
5. Implement duplicate pending payment and honest Test Mode behavior.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B10-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 10 - SECTION S3: Payment Flow - Checkout to trusted Success/Failure

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 10 - Billing & Payments (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test successful captured payment, failed payment, pending, duplicate click, same-cart duplicate and amount/currency

mismatch.

2. Replay same webhook/event, send authorized-only event and malformed event shape; verify no duplicate activation/invoice.
3. Force Invoice generation failure after activation and verify durable recovery.
4. Test Coupon concurrency and Checkout data cannot be tampered from Client.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 10 - Section 04: Invoices

B10-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 10 - SECTION S4: Invoices

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 10 - Billing & Payments (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Invoice list, detail, immutable issue-time snapshot, line items, taxes, GST data, Paid/Pending status and Print/PDF/Email behavior.
2. Use concurrency-safe human Invoice numbering and preserve historical versions/corrections from Admin Billing.
3. Do not regenerate old Invoice totals from current Plan price/Profile data.
4. Protect Invoice access by owner and Staff permission.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B10-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 10 - SECTION S4: Invoices

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 10 - Billing & Payments

(Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test list pagination, mobile card, Detail, Print/PDF and immutable snapshot after Profile/Plan edits.
2. Test concurrent Invoice number generation.
3. Test cross-user access and Email provider missing state.
4. Compare totals to Payment/line items/tax.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 10 - Section 05: Refunds, GST Settings and Manual Activation

B10-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 10 - SECTION S5: Refunds, GST Settings and Manual Activation

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 10 - Billing & Payments (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement user Refund Request/Tracker with reason, full/partial support according to policy and real provider lifecycle.
2. Implement GST Billing Details validation and B2B fields used for future Invoices without rewriting old snapshots.
3. Implement Manual Activation user display as Activated by support without fake Payment or paid Invoice.
4. Connect to Batch 12 Admin Refund/Credit Note/Manual Activation workflows and complete Audit/Notification history.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B10-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 10 - SECTION S5: Refunds, GST Settings and Manual Activation

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_07\_DESIGN\_BATCH\_10\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 10 - Billing & Payments (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Refund submit, partial/full validation, Admin decision, provider processing/failure and tracker state.
2. Test GST save/validation and new-vs-old Invoice behavior.
3. Test Manual Activation creates entitlement but no fake Payment/paid Invoice.
4. Test idempotency and cross-user access.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 10 - Integration Verification

BATCH 10 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 10: BILLING AND PAYMENTS

Run this only after every section in Batch 10 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Public Pricing Page, S2 In-Dashboard Billing, S3 Payment Flow - Checkout to trusted Success/Failure, S4 Invoices, S5 Refunds, GST Settings and Manual Activation

MANDATORY CROSS-SECTION FLOWS:

1. Pricing -> Checkout -> Webhook -> Subscription -> Invoice
2. Coupon/GST/usage semantics
3. Refund -> Admin processing -> tracker
4. Manual activation truth

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 08 - DESIGN BATCH 11: ADMIN MANAGEMENT AND MODERATION

SPECIFICATION: BATCH_DOCUMENT_08_DESIGN_BATCH_11_ADMIN_MANAGEMENT_MODERATION_FULL_SPEC.md

DESIGN SOURCE: Batch 11 - Admin Management (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 11 - Section 01: Admin Dashboard Overview - role aware

B11-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 11 - SECTION S1: Admin Dashboard Overview - role aware

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_08_DESIGN_BATCH_11_ADMIN_MANAGEMENT_MODERATION_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 11 - Admin Management (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact graphite Admin shell and role-aware Overview cards/queues; unauthorised modules show locked/Forbidden behavior without leaking counts.
2. Use permission-scoped aggregate queries for Properties, Projects, Requirements, Claims, Verification, Missing Locations, Support and other source cards.
3. Do not require one permission to aggregate every queue or leak counts across modules.
4. Keep mobile Admin drawer and no public bottom nav.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B11-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 11 - SECTION S1: Admin Dashboard Overview - role aware

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_08_DESIGN_BATCH_11_ADMIN_MANAGEMENT_MODERATION_FULL_SPEC.md' and 'Batch 11 - Admin Management (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test each Staff role and Super Admin card visibility/counts, direct Forbidden routes and no count leaks.
2. Test loading/error states and mobile drawer.
3. Compare actual queue counts to data.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.

3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 11 - Section 02: User Management and Role Change Reviews

B11-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 11 - SECTION S2: User Management and Role Change Reviews

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_08_DESIGN_BATCH_11_ADMIN_MANAGEMENT_MODERATION_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 11 - Admin Management (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement User list/detail with exact filters, search, pagination, masked contact by permission, safe selected fields and activity/entity summaries.
2. Implement Suspend/Ban/Restore with reason, Listing visibility/Lead restrictions/Notification/Audit and expiry/restoration policy.
3. Implement Role Change queue/detail and transactional approval/rejection aligned with User dashboard migration rules.
4. Avoid select(*) and raw search construction that leaks or breaks input safety.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B11-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 11 - SECTION S2: User Management and Role Change Reviews

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_08_DESIGN_BATCH_11_ADMIN_MANAGEMENT_MODERATION_FULL_SPEC.md' and 'Batch 11 - Admin Management (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test User Manager vs Verification Manager sensitive-contact visibility.
2. Test suspend/ban/restore effects across public Listing, login/actions and notifications.
3. Test Role Change approval migration, rejection and stale/concurrent decision.

4. Test pagination/search/filter and cross-permission denial.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 11 - Section 03: Staff Management, Invite, Permissions and Activity

B11-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 11 - SECTION S3: Staff Management, Invite, Permissions and Activity

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_08\_DESIGN\_BATCH\_11\_ADMIN\_MANAGEMENT\_MODERATION\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 11 - Admin Management (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Staff list/detail, Invite, permission matrix, role templates and activity history exactly.
2. Use secure hashed invite token, expiry, duplicate prevention and real Email send or honest provider Setup Required.
3. Enforce least privilege: no self permission escalation, non-Super Admin cannot edit Super Admin, grantor cannot grant permissions they do not hold.
4. Audit every permission/invite change.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B11-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 11 - SECTION S3: Staff Management, Invite, Permissions and Activity

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_08\_DESIGN\_BATCH\_11\_ADMIN\_MANAGEMENT\_MODERATION\_FULL\_SPEC.md` and `Batch 11 - Admin Management (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test invite valid/duplicate/expired/provider missing and acceptance.
2. Test self-change, Super Admin protection and grant-beyond-own permission denial.
3. Verify activity/audit and mobile layouts.
4. Test concurrent permission edits.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 11 - Section 04: Moderation Queues and Review Screens

B11-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 11 - SECTION S4: Moderation Queues and Review Screens

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_08_DESIGN_BATCH_11_ADMIN_MANAGEMENT_MODERATION_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 11 - Admin Management (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Property, Project and Requirement moderation queues, filters, pagination, oldest-first policy and exact Preview/Detail review design.
2. Implement checklist gates, Approve, Reject and Needs Changes with mandatory reasons, version/stale submission protection, Notifications and status events.
3. Enforce Project RERA publication gate and entity-specific permission matrix.
4. Include Missing Location, Duplicate merge and Claim review flows required by the full Batch 11 spec.
5. Use transactions/idempotency and avoid count permission leakage.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B11-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 11 - SECTION S4: Moderation Queues and Review Screens

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_08\_DESIGN\_BATCH\_11\_ADMIN\_MANAGEMENT\_MODERATION\_FULL\_SPEC.md` and `Batch 11 - Admin Management (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test each entity queue, checklist gating, approve/reject/needs-changes and user notification.
2. Edit/resubmit while reviewer page is stale and verify conflict.
3. Test Project RERA block/exception, Missing Location approval hierarchy, duplicate merge and Claim decision.
4. Test Staff permission combinations and mobile cards.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 11 - Section 05: Verification Requests and Support Tickets

B11-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 11 - SECTION S5: Verification Requests and Support Tickets

Work only on this section now. Read the full specification file `BATCH\_DOCUMENT\_08\_DESIGN\_BATCH\_11\_ADMIN\_MANAGEMENT\_MODERATION\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 11 - Admin Management (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Verification queue/detail with private document viewer, watermarks/access logging where required, decision reasons and full status history.
2. Implement Support Ticket queue, assignment/status, threaded replies, attachments/private access and User-facing synchronization.
3. Use exact Staff permission gates and no public document URLs.
4. Audit sensitive access and decisions.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B11-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 11 - SECTION S5: Verification Requests and Support Tickets

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_08_DESIGN_BATCH_11_ADMIN_MANAGEMENT_MODERATION_FULL_SPEC.md' and 'Batch 11 - Admin Management (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Run Verification submit -> review -> reject -> resubmit -> approve with User dashboard synchronization.
2. Test unauthorized document access and sensitive access audit.
3. Run Support Ticket create -> Admin reply -> status update -> User view -> resolve.
4. Test assignment, pagination, attachments provider state and permissions.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 11 - Integration Verification

BATCH 11 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 11: ADMIN MANAGEMENT AND MODERATION

Run this only after every section in Batch 11 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Admin Dashboard Overview - role aware, S2 User Management and Role Change Reviews, S3 Staff Management, Invite, Permissions and Activity, S4 Moderation Queues and Review Screens, S5 Verification Requests and Support Tickets

MANDATORY CROSS-SECTION FLOWS:

1. Role-aware overview -> queues
2. User suspension/role change effects
3. Staff permission enforcement
4. Moderation -> user/public states
5. Verification/Support synchronization

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 09 - DESIGN BATCH 12: ADMIN BILLING AND PAYMENTS

SPECIFICATION: BATCH_DOCUMENT_09_DESIGN_BATCH_12_ADMIN BILLING_PAYMENTS_FULL_SPEC.md

DESIGN SOURCE: Batch 12 - Admin Billing (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 12 - Section 01: Subscriptions

B12-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 12 - SECTION S1: Subscriptions

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_09_DESIGN_BATCH_12_ADMIN BILLING_PAYMENTS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 12 - Admin Billing (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Subscriptions List with search/status/plan/role filters, exact columns, server pagination and mobile cards.
2. Implement Subscription Detail with usage, Plan history and Manual Extend +7/+14/+30 days, confirmation, reason/governance, idempotency and audit.
3. Use correct period arithmetic and subscription events; do not fake Payment/Invoice for extension.
4. Protect high-risk action by permission.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B12-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 12 - SECTION S1: Subscriptions

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_09_DESIGN_BATCH_12_ADMIN BILLING_PAYMENTS_FULL_SPEC.md' and 'Batch 12 - Admin Billing (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test filters/pagination, active/trial/cancelled/expired displays and exact renewal context.
2. Test Manual Extend each duration, duplicate click, stale subscription and unauthorized Staff.
3. Verify events, dates, notifications and Audit.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.

6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 12 - Section 02: Payments and Webhook Events

B12-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 12 - SECTION S2: Payments and Webhook Events

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_09\_DESIGN\_BATCH\_12\_ADMIN\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 12 - Admin Billing (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Payment List filters/table/mobile, Payment Detail safe projection and Reconcile with gateway.
2. Never render raw gateway JSON/secrets; mask IDs/refs and keep provider keys server-only.
3. Implement Webhook Event log with processed/failed/queued states, attempt count and idempotent Retry.
4. Correct capture semantics, event identity fallback and event-type payload validation; Retry must not duplicate Payment/Subscription/Invoice/Coupon/Add-on/Refund effects.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B12-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 12 - SECTION S2: Payments and Webhook Events

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_09\_DESIGN\_BATCH\_12\_ADMIN\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 12 - Admin Billing (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test payment filters/detail masking and gateway reconcile mismatches.
2. Replay captured event, authorized-only event, duplicate ID, missing ID and malformed payload.
3. Force failed webhook, Retry twice and verify single financial outcome.
4. Inspect Browser payload for raw JSON/secrets.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.

3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 12 - Section 03: Refunds, Credit Notes and Manual Activation

B12-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 12 - SECTION S3: Refunds, Credit Notes and Manual Activation

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_09\_DESIGN\_BATCH\_12\_ADMIN\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 12 - Admin Billing (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Refund Queue and Refund Detail with real reason, full remaining refundable amount, Partial validation, decision reason and Approve/Reject.
2. Use honest lifecycle Pending -> Approved -> Processing -> Processed and keep failures recoverable; enforce concurrency-safe no-over-refund and idempotency.
3. Implement Credit Note list/issue with reason, tax reversal, immutable issued record, Invoice/refund relationship and concurrency-safe numbering.
4. Implement Manual Activation with reason, Plan/duration, admin_grant source, no fake Payment/paid Invoice and lifecycle expiry.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B12-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 12 - SECTION S3: Refunds, Credit Notes and Manual Activation

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_09\_DESIGN\_BATCH\_12\_ADMIN\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 12 - Admin Billing (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test full/partial Refund, two concurrent approvals, provider failure/recovery and rejection.

2. Test Credit Note issue/number concurrency/tax totals and immutability.
3. Test Manual Activation duplicate/conflict, Billing user display and expiry.
4. Verify permissions and Audit.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 12 - Section 04: Plans and Coupons Administration

B12-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 12 - SECTION S4: Plans and Coupons Administration

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_09\_DESIGN\_BATCH\_12\_ADMIN\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 12 - Admin Billing (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Plans List and Create/Edit with role, price, cycle, feature limits, Active/Archived and live Public Pricing preview using the same card component.
2. Use stable Plan code and preserve historical Subscription/Invoice prices after Plan edits.
3. Implement Coupon List and Create/Edit with percentage/flat discounts, valid from/to, usage limit and multi-Plan applicability via proper relation, not comma-separated IDs.
4. Use atomic Coupon redemption/usage counting and server validation.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B12-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 12 - SECTION S4: Plans and Coupons Administration

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_09\_DESIGN\_BATCH\_12\_ADMIN\_BILLING\_PAYMENTS\_FULL\_SPEC.md` and `Batch 12 - Admin Billing

(Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Plan create/edit/archive and verify Public Pricing preview/output plus unchanged historical Invoices.
2. Test Coupon multi-Plan applicability, valid-from/to, expiry, usage limit and per-user rules.
3. Run concurrent final Coupon redemption at last available usage and prove one valid consumption.
4. Test permissions/Audit.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 12 - Section 05: Trial Campaigns

B12-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 12 - SECTION S5: Trial Campaigns

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_09\_DESIGN\_BATCH\_12\_ADMIN\_BILLING\_PAYMENTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 12 - Admin Billing (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Trial Campaign list with role, duration and real active-user counts.
2. Implement Grant Trial and Revoke Trial with campaign selection, role validation, eligibility, no paid Subscription override and exact source confirmation.
3. Keep Trial and Subscription state synchronized; Revoke falls back to correct role-specific Free plan, not hard-coded generic plan.
4. Notify User with Staff reason, audit action and schedule natural expiry.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B12-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 12 - SECTION S5: Trial Campaigns

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_09_DESIGN_BATCH_12_ADMIN_BILLING_PAYMENTS_FULL_SPEC.md' and 'Batch 12 - Admin Billing (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test campaign counts and role eligibility.
2. Test grant duplicate, active paid Subscription conflict and natural expiry.
3. Test Revoke confirmation, immediate feature change, Free-plan fallback, Notification and Audit.
4. Test concurrent grant/revoke stale state.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 12 - Integration Verification

BATCH 12 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 12: ADMIN BILLING AND PAYMENTS

Run this only after every section in Batch 12 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Subscriptions, S2 Payments and Webhook Events, S3 Refunds, Credit Notes and Manual Activation, S4 Plans and Coupons Administration, S5 Trial Campaigns

MANDATORY CROSS-SECTION FLOWS:

1. Subscription/Payment/Webhook reconciliation
2. Refund/Credit Note/Invoice consistency
3. Plan -> public Pricing
4. Coupon atomic redemption
5. Trial grant/revoke -> user Billing

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 10 - DESIGN BATCH 13: ADMIN ADS, NOTIFICATIONS AND SYSTEM

SPECIFICATION: BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md

DESIGN SOURCE: Batch 13 - Admin Ads Notifications System (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 13 - Section 01: Ads Admin - queue, review, active/expired and fraud review

B13-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 13 - SECTION S1: Ads Admin - queue, review, active/expired and fraud review

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_10\_DESIGN\_BATCH\_13\_ADMIN\_ADS\_NOTIFICATIONS\_SYSTEM\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 13 - Admin Ads Notifications System (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Ads Queue, Ad Review Detail, Active/Expired list and Fraud/Click Review exactly.
2. Validate creative slots/sizes, targeting, City priority, RERA linkage, payment/review/activation/expiry and honest performance values or dash.
3. Use PII-safe fraud patterns and permission-scoped actions; connect Builder campaigns and Admin decisions.
4. Implement real audit, notifications and pagination.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B13-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 13 - SECTION S1: Ads Admin - queue, review, active/expired and fraud review

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_10\_DESIGN\_BATCH\_13\_ADMIN\_ADS\_NOTIFICATIONS\_SYSTEM\_FULL\_SPEC.md` and `Batch 13 - Admin Ads Notifications System (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Submit campaign from Builder flow and verify queue/review/decision/activation/expiry.
2. Test creative sizes, targeting, RERA, unpaid state and rejection reason.
3. Verify performance is real or dash, not simulated.
4. Test fraud review masking and permissions.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.

3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 13 - Section 02: Notification Admin - templates, editor, logs and defaults

B13-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 13 - SECTION S2: Notification Admin - templates, editor, logs and defaults

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Template list and editor with token chips, multi-language tabs, live preview and missing Gujarati -> English fallback.
2. Validate allowed tokens and prevent unsafe arbitrary template injection.
3. Implement Delivery Logs with Sent/Failed/Skipped truth, safe provider errors and Retry where policy allows.
4. Implement event x channel default matrix for new users without overwriting existing user preferences.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B13-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 13 - SECTION S2: Notification Admin - templates, editor, logs and defaults

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' and 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Edit template tokens/languages and verify live preview plus missing-translation fallback.
2. Send test notifications with provider active/missing and verify Sent/Failed/Skipped logs.
3. Test invalid token and unsafe content handling.
4. Test defaults apply only to new users and permissions/Audit.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 13 - Section 03: Provider Status Dashboard and Provider Detail/Test

B13-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 13 - SECTION S3: Provider Status Dashboard and Provider Detail/Test

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Provider grid and Detail/Test for all configured systems with real status, last test and safe Setup Required/Error states.
2. Treat keys as write-only; render masked identifiers only and never return full secrets to Browser.
3. Implement provider-specific test connection server-side and safe error summary.
4. Enforce fallbacks: WhatsApp missing -> skipped/logged; Maps missing -> list/address fallback; Analytics missing -> Setup Required.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B13-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 13 - SECTION S3: Provider Status Dashboard and Provider Detail/Test

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' and 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test configured, missing and invalid credentials for representative providers.
2. Inspect Network/HTML for secret leakage and confirm write-only behavior.
3. Test connection action permissions and Audit.
4. Verify downstream fallback surfaces change honestly.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 13 - Section 04: Feature Flags - list and toggle confirmation

B13-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 13 - SECTION S4: Feature Flags - list and toggle confirmation

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Feature Flag list with key, description, environment/state and permission-aware controls.
2. Implement toggle confirmation with impact text and mandatory audit note/reason where specified.
3. Use server-side flag authority and safe caching/invalidation; do not expose secrets in flag payload.
4. Protect production-critical flags and stale concurrent toggles.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B13-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 13 - SECTION S4: Feature Flags - list and toggle confirmation

Do not trust the implementation report as proof. Open the running application and manually verify this section against

'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' and 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser

Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Toggle a safe test flag, verify confirmation, effect, cache refresh and Audit.
2. Test unauthorized Staff, self/stale concurrent toggle and protected production flag.
3. Verify mobile/desktop layouts and no dead switches.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 13 - Section 05: Maintenance Mode control and public maintenance page

B13-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 13 - SECTION S5: Maintenance Mode control and public maintenance page

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Admin Maintenance control with enable/disable confirmation, reason, optional schedule/message and Audit.
2. Implement public Maintenance page exactly, while allowing authorised Admin access and critical provider/webhook paths according to policy.
3. Ensure maintenance state is globally consistent and reversible; no partial cache inconsistency.
4. Do not block payment/webhook callbacks incorrectly.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B13-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 13 - SECTION S5: Maintenance Mode control and public maintenance page

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_10\_DESIGN\_BATCH\_13\_ADMIN\_ADS\_NOTIFICATIONS\_SYSTEM\_FULL\_SPEC.md` and `Batch 13 - Admin Ads Notifications System (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Enable Maintenance and test public, authenticated User and Admin access paths.
2. Test webhook/health exceptions according to policy.
3. Disable and verify immediate recovery/cache consistency.
4. Check reason/Audit and mobile page.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 13 - Section 06: System Health and Dead-Letter Queue

B13-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 13 - SECTION S6: System Health and Dead-Letter Queue

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_10\_DESIGN\_BATCH\_13\_ADMIN\_ADS\_NOTIFICATIONS\_SYSTEM\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 13 - Admin Ads Notifications System (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement System Health dashboard using real database/provider/job metrics; no fake green statuses.
2. Implement Dead-Letter Queue with safe error summary, job/event type, attempts, next action and pagination.
3. Never render raw stack traces, payload secrets or private PII.
4. Implement retry/requeue/dismiss according to event type, confirmation and audit; Dismiss requires confirmation and should not delete forensic history silently.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B13-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 13 - SECTION S6: System Health and Dead-Letter Queue

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_10_DESIGN_BATCH_13_ADMIN_ADS_NOTIFICATIONS_SYSTEM_FULL_SPEC.md' and 'Batch 13 - Admin Ads Notifications System (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Force representative provider/job failures and verify real health degradation.
2. Inspect DLQ rows for safe summaries and no secrets/raw stack traces.
3. Test Retry/Requeue idempotency and Dismiss confirmation/Audit.
4. Test permissions and large-list pagination.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 13 - Integration Verification

BATCH 13 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 13: ADMIN ADS, NOTIFICATIONS AND SYSTEM

Run this only after every section in Batch 13 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Ads Admin - queue, review, active/expired and fraud review, S2 Notification Admin - templates, editor, logs and defaults, S3 Provider Status Dashboard and Provider Detail/Test, S4 Feature Flags - list and toggle confirmation, S5 Maintenance Mode control and public maintenance page, S6 System Health and Dead-Letter Queue

MANDATORY CROSS-SECTION FLOWS:

1. Builder Campaign -> Ads Review -> Active/Expired/Fraud
2. Notification template -> delivery log
3. Provider status -> downstream fallback
4. Flags/Maintenance/System Health
5. DLQ retry/idempotency

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 11 - DESIGN BATCH 14: ADMIN CMS, SEO AND LOCATIONS

SPECIFICATION: BATCH_DOCUMENT_11_DESIGN_BATCH_14_ADMIN_CMS_SEO_LOCATIONS_FULL_SPEC.md

DESIGN SOURCE: Batch 14 - Admin CMS & SEO (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 14 - Section 01: Content Editing System - CMS, Blog and Legal

B14-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 14 - SECTION S1: Content Editing System - CMS, Blog and Legal

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_11_DESIGN_BATCH_14_ADMIN_CMS_SEO_LOCATIONS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 14 - Admin CMS & SEO (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement one coherent editor system for CMS Pages, Blog Posts and Legal Documents with shared toolbar, SEO sidebar and Draft/Preview/Publish action group.
2. Implement CMS list/editor, Blog list/editor with Featured Image, Categories and Excerpt, and restricted Legal editor.
3. Legal publishing requires approval/sign-off; Publish disabled until exact revision is approved.
4. Use revision/version history, autosave, Preview from Draft, Published-only public output and permission-scoped actions.
5. Sanitize rendered content and protect Draft/private media.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B14-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 14 - SECTION S1: Content Editing System - CMS, Blog and Legal

Do not trust the implementation report as proof. Open the running application and manually verify this section against

'BATCH_DOCUMENT_11_DESIGN_BATCH_14_ADMIN_CMS_SEO_LOCATIONS_FULL_SPEC.md' and 'Batch 14 - Admin CMS & SEO (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Create/edit/preview/publish CMS and Blog content and verify public cache invalidation.
2. Create Legal Draft, request sign-off, approve exact revision, edit after approval and verify old approval cannot publish new revision.
3. Test permissions, autosave race, Draft privacy and public Published-only output.
4. Verify image/category/excerpt and SEO sidebar persistence.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.

3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 14 - Section 02: SEO Settings, Redirects and Sitemap

B14-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 14 - SECTION S2: SEO Settings, Redirects and Sitemap

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_11\_DESIGN\_BATCH\_14\_ADMIN\_CMS\_SEO\_LOCATIONS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 14 - Admin CMS & SEO (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement metadata quick edit, canonical and indexability controls connected to public output.
2. Implement Redirects list and Create/Edit with source/target/status, duplicate/conflict checks and redirect-loop detection.
3. Implement Sitemap status/regeneration using Published+Indexable content/entity authority.
4. Keep Draft/private/Admin routes excluded and old canonical routes redirected intentionally.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B14-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 14 - SECTION S2: SEO Settings, Redirects and Sitemap

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_11\_DESIGN\_BATCH\_14\_ADMIN\_CMS\_SEO\_LOCATIONS\_FULL\_SPEC.md` and `Batch 14 - Admin CMS & SEO (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Change metadata/indexability and verify rendered head and sitemap.
2. Create valid redirect, duplicate source, chain and loop; verify loop warning/block.
3. Publish/unpublish content and verify sitemap updates.
4. Test permissions/Audit and no private URL leak.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 14 - Section 03: Location Hierarchy and Multilingual Location Editor

B14-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 14 - SECTION S3: Location Hierarchy and Multilingual Location Editor

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_11\_DESIGN\_BATCH\_14\_ADMIN\_CMS\_SEO\_LOCATIONS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 14 - Admin CMS & SEO (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement canonical hierarchy Country -> State -> District -> Taluka -> City/Village -> Area/Locality -> Society/Building as approved.
2. Implement list/tree navigation, Create/Edit, multilingual names, aliases and parent-child validation.
3. Allow Taluka collapse/normalization where same as City according to policy without duplicating hierarchy incorrectly.
4. Connect Missing Location approvals so approved requests create pending/approved canonical children rather than free-text corruption.
5. Index/search aliases for Batch 17 transliteration search.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B14-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 14 - SECTION S3: Location Hierarchy and Multilingual Location Editor

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_11\_DESIGN\_BATCH\_14\_ADMIN\_CMS\_SEO\_LOCATIONS\_FULL\_SPEC.md` and `Batch 14 - Admin CMS & SEO (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Create hierarchy path, edit multilingual name/alias and verify Search selection.
2. Test invalid parent type, duplicate normalized Location and Taluka/City edge case.
3. Approve Missing Location request and verify canonical relation/back-reference.
4. Test permissions, pagination/tree performance and public fallback.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 14 - Section 04: Missing Translation Tracker

B14-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 14 - SECTION S4: Missing Translation Tracker

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_11\_DESIGN\_BATCH\_14\_ADMIN\_CMS\_SEO\_LOCATIONS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 14 - Admin CMS & SEO (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement translation tracker with source key/content, language, status, missing/pending/complete counts and filter/search.
2. Connect to UI/content translation registry and Batch 17 English fallback + subtle pending behavior.
3. Do not auto-publish machine-generated Legal translation as authoritative.
4. Implement review/update workflow, permissions and audit for sensitive Legal translations.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B14-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 14 - SECTION S4: Missing Translation Tracker

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_11\_DESIGN\_BATCH\_14\_ADMIN\_CMS\_SEO\_LOCATIONS\_FULL\_SPEC.md` and `Batch 14 - Admin CMS & SEO (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and

permission failures.

MANDATORY VERIFICATION:

1. Create missing Gujarati translation and verify tracker row, English fallback and subtle pending UI.
2. Complete translation and verify fallback disappears without cache delay.
3. Test Legal translation approval restrictions and no raw translation keys in public UI.
4. Test filters/counts and permissions.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 14 - Integration Verification

BATCH 14 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 14: ADMIN CMS, SEO AND LOCATIONS

Run this only after every section in Batch 14 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Content Editing System - CMS, Blog and Legal, S2 SEO Settings, Redirects and Sitemap, S3 Location Hierarchy and Multilingual Location Editor, S4 Missing Translation Tracker

MANDATORY CROSS-SECTION FLOWS:

1. CMS/Blog/Legal Draft -> approval -> Publish -> public output
2. SEO metadata/redirect/sitemap
3. Location hierarchy -> Search/Posting
4. Translation tracker -> public fallback

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 12 - DESIGN BATCH 15: ADMIN AUDIT, SECURITY AND REPORTS

SPECIFICATION: BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md

DESIGN SOURCE: Batch 15 - Admin Audit Security Reports (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 15 - Section 01: Audit Logs Viewer - append only

B15-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 15 - SECTION S1: Audit Logs Viewer - append only

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement exact Audit Viewer with Search Actor/Target, Actor filter, Module filter, Date range, pagination and desktop table/mobile cards.
2. Implement read-only Detail with masked IP and human-readable Before/After diff.
3. Enforce append-only at database/security layer: no Update/Delete, not just hidden UI.
4. Use safe snapshots only and explicit System actor.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B15-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 15 - SECTION S1: Audit Logs Viewer - append only

Do not trust the implementation report as proof. Open the running application and manually verify this section against

'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' and 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Filter/search/paginate real logs and open read-only diff.
2. Attempt Update/Delete through app/admin role and verify denial.
3. Inspect masked network context and no secret/private document in snapshots.
4. Test mobile cards/loading/empty/error/Retry.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.

5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 15 - Section 02: Security Events Dashboard

B15-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 15 - SECTION S2: Security Events Dashboard

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement 24h/7d/30d Security dashboard with real Failed Login, Rate Limit and Suspicious IP metrics and recent events.
2. Implement privacy-safe OTP Flooding, Credential Stuffing and Admin New Device events with severity and honest automatic actions.
3. Store restricted raw evidence separately; normal UI shows masked IP/device context.
4. Connect real temporary block expiry/review state and provider Setup Required for unavailable telemetry.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B15-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 15 - SECTION S2: Security Events Dashboard

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' and 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Generate controlled failed-login/rate-limit/OTP flood/new-device events and verify counts/details.
2. Confirm actual block record/expiry before showing Auto-blocked.
3. Inspect UI/Network for raw IP/device fingerprint leakage.
4. Test range controls, empty/provider states and permissions.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.

2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 15 - Section 03: Reports/Fraud Queue and Report Detail

B15-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 15 - SECTION S3: Reports/Fraud Queue and Report Detail

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Report Queue with Type, Entity, Reporter, Submitted, Priority, status, pagination and review entry.
2. Implement Report Detail with evidence text/private attachments, reported entity preview, related history and exact reason-required actions: Warn, Suspend, Remove content, Dismiss.
3. Connect public/System reports to one queue and preserve reporter privacy.
4. Use transactional/stale-safe decisions, Notifications and Audit.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B15-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 15 - SECTION S3: Reports/Fraud Queue and Report Detail

Do not trust the implementation report as proof. Open the running application and manually verify this section against

'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' and 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Submit real user and System-pattern reports, verify priority/order and queue.
2. Open private evidence, Listing preview and related history; test unauthorized evidence access.
3. Test each action without/with reason, stale concurrent decision and downstream effects.

4. Verify reporter identity is not leaked to reported user.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 15 - Section 04: Special Reviews - duplicate Lead, Reveal logs, Message report and Visit dispute

B15-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 15 - SECTION S4: Special Reviews - duplicate Lead, Reveal logs, Message report and Visit dispute

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_12\_DESIGN\_BATCH\_15\_ADMIN\_AUDIT\_SECURITY\_REPORTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 15 - Admin Audit Security Reports (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Duplicate Lead review with canonical keep record, merge-in record, timeline/Notes/Visit preservation, canonical pointer and irreversible confirmation.
2. Implement Contact Reveal Logs with Abuse Investigation permission and audit the act of viewing the restricted log; show PII-safe anomaly aggregation.
3. Implement Message Report review with bounded Thread context, flagged Message, sender history, reason-required actions and sensitive access audit.
4. Implement Site Visit dispute with both participant outcomes side-by-side, required resolution notes and canonical outcome update.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B15-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 15 - SECTION S4: Special Reviews - duplicate Lead, Reveal logs, Message

report and Visit dispute

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_12\_DESIGN\_BATCH\_15\_ADMIN\_AUDIT\_SECURITY\_REPORTS\_FULL\_SPEC.md` and `Batch 15 - Admin Audit Security Reports (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test Lead merge idempotency, data preservation and Not Duplicates action.
2. Test Reveal Log denial/allow and access Audit; verify no unnecessary full phone column.
3. Test Message context permissions/access audit and Warn/Suspend/Dismiss.
4. Create conflicting Visit outcomes and test Disputed state, resolution and metric/timeline consistency.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 15 - Section 05: Business Metrics and Export Management

B15-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 15 - SECTION S5: Business Metrics and Export Management

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_12\_DESIGN\_BATCH\_15\_ADMIN\_AUDIT\_SECURITY\_REPORTS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 15 - Admin Audit Security Reports (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement real Platform Overview metrics and City-wise counts using database-native aggregates where available.
2. Keep behavioral Analytics separate and show Setup Required when provider is absent; never simulate funnels/session trends.
3. Implement Export request for Listings/Leads/Users/Payments/Audit Logs, per-type permissions, From/To validation and CSV/XLSX/JSON.
4. Use asynchronous Export jobs, Queued/Processing/Ready/Failed/Expired states, private storage, signed 24h-style expiry, Retry and download audit.
5. Protect CSV against formula injection and large exports through batching.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B15-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 15 - SECTION S5: Business Metrics and Export Management

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' and 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Verify database metrics against source records and Analytics provider matrix.
2. Request each allowed Export type, test unauthorized sensitive type, range limits and real XLSX/JSON output.
3. Test Processing/Ready/Failed/Retry/Expired link and sensitive download audit.
4. Inspect generated files for data scope and injection escaping.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 15 - Section 06: Bulk Action Preview and Maker-Checker Queue

B15-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 15 - SECTION S6: Bulk Action Preview and Maker-Checker Queue

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_12_DESIGN_BATCH_15_ADMIN_AUDIT_SECURITY_REPORTS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 15 - Admin Audit Security Reports (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Bulk Action sequence: selection -> server Preview -> affected/excluded records -> impact text -> confirm -> server revalidation -> execute.
2. Use real affected count/list, conditional eligibility, transaction/durable job, idempotent Notifications and Audit.
3. Implement Maker-Checker queue with Maker, Action, Reason, Waiting, Approve and Reject.
4. Enforce checker != maker server-side, own actions disabled, stale-target revalidation, Approved vs Executed distinction, expiry and execution recovery.
5. Connect high-risk Refund/Bulk Suspension/etc. to their real domain orchestration.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.

7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B15-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 15 - SECTION S6: Bulk Action Preview and Maker-Checker Queue

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_12\_DESIGN\_BATCH\_15\_ADMIN\_AUDIT\_SECURITY\_REPORTS\_FULL\_SPEC.md` and `Batch 15 - Admin Audit Security Reports (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Preview a bulk action, make one record stale, execute and verify exact success/excluded counts.
2. Double-submit bulk action and verify no duplicate effects/Notifications.
3. Create maker request, test self-approval UI and direct server denial, then second checker approval.
4. Test two checkers concurrent decision, execution failure/recovery and full Audit chain.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 15 - Integration Verification

BATCH 15 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 15: ADMIN AUDIT, SECURITY AND REPORTS

Run this only after every section in Batch 15 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 Audit Logs Viewer - append only, S2 Security Events Dashboard, S3 Reports/Fraud Queue and Report Detail, S4 Special Reviews - duplicate Lead, Reveal logs, Message report and Visit dispute, S5 Business Metrics and Export Management, S6 Bulk Action Preview and Maker-Checker Queue

MANDATORY CROSS-SECTION FLOWS:

1. Public/System report -> queue -> decision
2. Sensitive access -> audit
3. Lead merge data integrity
4. Visit dispute -> canonical outcome
5. Exports permissions/security
6. Maker-checker -> real domain execution

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 13 - DESIGN BATCH 16: PUBLIC CONTENT PAGES

SPECIFICATION: BATCH_DOCUMENT_13_DESIGN_BATCH_16_PUBLIC_CONTENT_PAGES_FULL_SPEC.md

DESIGN SOURCE: Batch 16 - Public Content Pages (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 16 - Section 01: About and Contact

B16-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 16 - SECTION S1: About and Contact

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_13_DESIGN_BATCH_16_PUBLIC_CONTENT_PAGES_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 16 - Public Content Pages (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement About public page from Batch 14 Published CMS content with exact trust blocks and qualitative claims only.
2. Implement Contact public form/category routing, validation, persistence, rate limiting, success/error states and authenticated prefill where safe.
3. Implement Maps Active state and Setup Required address fallback, central support email, WhatsApp/native intent honesty and support hours from configuration.
4. Reconcile Footer routes so About/Contact no longer fall back to generic Support.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B16-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 16 - SECTION S1: About and Contact

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_13_DESIGN_BATCH_16_PUBLIC_CONTENT_PAGES_FULL_SPEC.md' and 'Batch 16 - Public Content Pages (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Publish About Draft and verify public content/cache/SEO update.
2. Submit Contact categories and verify correct persistence/routing, duplicate/rate limit and failure state.
3. Test Maps configured/missing and WhatsApp/provider modes.
4. Check mobile Contact and desktop About visual match.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.

4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 16 - Section 02: Help Center and Safety Guidelines

B16-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 16 - SECTION S2: Help Center and Safety Guidelines

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 16 - Public Content Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement FAQ/Help Center category filters and accessible accordions from real content authority.
2. Keep answers consistent with actual moderation, edit/reapproval, contact privacy and Refund workflows.
3. Implement Still Need Help -> Guest or authenticated Ticket flow.
4. Implement Safety Guidelines exact critical rules and Report guidance with truthful operational SLA.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B16-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 16 - SECTION S2: Help Center and Safety Guidelines

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` and `Batch 16 - Public Content Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test FAQ categories/accordions, deep links and empty/error states.
2. Compare answers to live workflows and provider availability.
3. Test Raise Ticket routing as Guest and logged-in User.
4. Verify Safety mobile design and Report action.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.

2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 16 - Section 03: Shared Legal Reader and 11 Legal Policies

B16-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 16 - SECTION S3: Shared Legal Reader and 11 Legal Policies

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 16 - Public Content Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement one shared Legal Reader for Terms, Privacy, Cookie, Refund, Cancellation, Listing, Advertising, Verification, Payment, Disclaimer and Grievance.
2. Implement desktop sticky TOC, mobile collapsible TOC, title, actual Last Updated/effective metadata, anchors and sanitized Published revision rendering.
3. Only latest approved Published Legal revision may be public; Draft/sign-off-pending revisions remain private.
4. Implement Listing Policy Do/Do Not strip, Disclaimer prominent callout and Grievance Officer block.
5. Reconcile canonical routes, old redirects, SEO/indexability and sitemap.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B16-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 16 - SECTION S3: Shared Legal Reader and 11 Legal Policies

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` and `Batch 16 - Public Content Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test desktop TOC sticky/anchor offset and mobile collapsible TOC on representative long policy.

2. Create Legal vNext Draft, sign-off and publish sequence; verify public version consistency at every state.
3. Test all 11 routes, special Listing/Disclaimer/Grievance blocks and internal links.
4. Check duplicate canonical routes, sitemap and no Draft leak.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 16 - Section 04: Cookie Preference Manager

B16-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 16 - SECTION S4: Cookie Preference Manager

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 16 - Public Content Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement one shared consent manager opened from Cookie Policy, Footer and Batch 17 consent prompt.
2. Desktop uses modal; mobile uses bottom sheet with Essential always on, Analytics and Marketing choices, Reject Non-Essential and Save Preferences.
3. Persist consent categories, policy version and timestamp; support withdrawal/revisit.
4. Block Analytics/Marketing initialization before applicable consent and combine with provider Active state.
5. Implement focus management, save failure and safe-area behavior.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B16-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 16 - SECTION S4: Cookie Preference Manager

Do not trust the implementation report as proof. Open the running application and manually verify this section against

`BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` and `Batch 16 - Public Content Pages

(Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Fresh browser Network test before consent; verify no unauthorized tracking.
2. Test Reject Non-Essential, enable Analytics only, Marketing separately and Footer revisit.
3. Test Provider Active/Missing x Consent On/Off matrix.
4. Test desktop modal/mobile sheet focus and save failure.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 16 - Section 05: Blog Listing and Blog Post

B16-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 16 - SECTION S5: Blog Listing and Blog Post

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 16 - Public Content Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Blog Listing from Published Batch 14 Posts with category tabs, real Featured Images, Excerpt, Author, calculated reading time, date and pagination.
2. Implement category empty state and Browse All reset.
3. Implement Blog Post with mobile reading progress, Hero, category, Author/meta, safe structured body and real Related Posts excluding current/Drafts.
4. Implement Draft slug 404, Article metadata, canonical/sitemap and cache invalidation.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B16-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 16 - SECTION S5: Blog Listing and Blog Post

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` and `Batch 16 - Public Content Pages (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Publish Posts/Categories, test filters, pagination and empty Home Loans-style category.
2. Open Post, verify reading progress follows scroll and Related selection.
3. Guess Draft slug and inspect sitemap/related list for leak.
4. Test image failures, mobile reading layout and SEO structured data.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 16 - Section 06: Support Tickets - Guest Request and My Tickets/Thread

B16-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 16 - SECTION S6: Support Tickets - Guest Request and My Tickets/Thread

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_13\_DESIGN\_BATCH\_16\_PUBLIC\_CONTENT\_PAGES\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 16 - Public Content Pages (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Guest Support Request with controlled categories, validation, real Ticket persistence and server-side maximum 3 requests/hour.
2. Connect to the same Ticket system as Batch 11 Admin Support and authenticated My Tickets.
3. Implement My Tickets own-data list, status, updated ordering, pagination and read-only Thread with real User/Support messages.
4. Protect Guest tracking links with high-entropy token/hash if tracking is offered and keep attachments private.
5. Use honest Email acknowledgment when provider missing.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B16-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 16 - SECTION S6: Support Tickets - Guest Request and My Tickets/Thread

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_13_DESIGN_BATCH_16_PUBLIC_CONTENT_PAGES_FULL_SPEC.md' and 'Batch 16 - Public Content Pages (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Submit Guest requests 1-3 and verify 4 is blocked with no fourth Ticket.
2. Login, verify only own Tickets, open Thread and test cross-user denial.
3. Have Admin reply/resolve and verify public list/thread synchronization.
4. Test provider missing acknowledgment and mobile keyboard/layout.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 16 - Integration Verification

BATCH 16 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 16: PUBLIC CONTENT PAGES

Run this only after every section in Batch 16 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 About and Contact, S2 Help Center and Safety Guidelines, S3 Shared Legal Reader and 11 Legal Policies, S4 Cookie Preference Manager, S5 Blog Listing and Blog Post, S6 Support Tickets - Guest Request and My Tickets/Thread

MANDATORY CROSS-SECTION FLOWS:

1. Admin Publish -> public About/Legal/Blog
2. Footer routes and canonical URLs
3. Cookie consent shared with Batch 17
4. Guest Support -> Admin reply -> My Tickets
5. Provider fallbacks

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

PHASE 14 - DESIGN BATCH 17: ADVANCED PWA, LOCALIZATION AND TOOLS

SPECIFICATION: BATCH_DOCUMENT_14_DESIGN_BATCH_17_ADVANCED_PWA_LOCALIZATION_TOOLS_FULL_SPEC.md

DESIGN SOURCE: Batch 17 - Advanced PWA Localization Tools (Standalone).html

Execute every section below independently. Never send the Implementation Prompt and Manual Verification Prompt together.

Batch 17 - Section 01: PWA Install Prompt and Offline Banner

B17-S1A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 17 - SECTION S1: PWA Install Prompt and Offline Banner

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_14_DESIGN_BATCH_17_ADVANCED_PWA_LOCALIZATION_TOOLS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 17 - Advanced PWA Localization Tools (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Build real PWA foundation: manifest, icons, Service Worker registration, safe cache strategies and private-data/logout cache protection.
2. Implement Install Prompt only when supported, not installed, 2+ sessions and Not Now 30-day snooze expired.
3. Invoke actual native install flow and handle accepted/dismissed state honestly, including platform differences.
4. Implement real Online/Offline banner above Header, reconnect behavior and branded safe offline fallback; never fake mutation success offline.
5. Do not queue financial/high-risk mutations blindly offline.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B17-S1B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 17 - SECTION S1: PWA Install Prompt and Offline Banner

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_14_DESIGN_BATCH_17_ADVANCED_PWA_LOCALIZATION_TOOLS_FULL_SPEC.md' and 'Batch 17 - Advanced PWA Localization Tools (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test fresh first session no prompt, second valid session eligible, Not Now suppression within 30 days and post-expiry eligibility.
2. Install supported PWA and verify no prompt in standalone mode.
3. Go offline/reconnect, inspect Banner position/cache behavior and attempt server mutation/payment action.
4. Test logout/private cache exposure and Service Worker failure fallback.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
 2. Every visible action works; no href="#", dead button or fake success.
 3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
 4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
 5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
 6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
 7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
 8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.
- Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 17 - Section 02: Language Selector, Theme and Transliteration-Tolerant Search

B17-S2A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 17 - SECTION S2: Language Selector, Theme and Transliteration-Tolerant Search

Work only on this section now. Read the full specification file `'BATCH_DOCUMENT_14_DESIGN_BATCH_17_ADVANCED_PWA_LOCALIZATION_TOOLS_FULL_SPEC.md'` for context and inspect the exact section screens/states in `'Batch 17 - Advanced PWA Localization Tools (Standalone).html'`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement English default, Gujarati available and Hindi Coming Soon non-selectable state with persistent preference and correct document language.
2. Use Batch 14 translation authority; missing translation falls back to English with subtle pending state, never raw key or fake translation.
3. Implement Light, Dark and System using token swaps only, early initialization and live OS change listener for System.
4. Integrate search aliases/transliteration/typo tolerance with Batch 14 canonical Location Alias data while preserving working amdavad/baroda-style aliases during migration.
5. Use safe ranking/ambiguity handling and indexed lookup.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B17-S2B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 17 - SECTION S2: Language Selector, Theme and Transliteration-Tolerant Search

Do not trust the implementation report as proof. Open the running application and manually verify this section against `'BATCH_DOCUMENT_14_DESIGN_BATCH_17_ADVANCED_PWA_LOCALIZATION_TOOLS_FULL_SPEC.md'` and `'Batch 17 - Advanced PWA Localization Tools (Standalone).html'`. Use real Development fixtures and inspect actual database/state changes, Browser

Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Test language persistence, missing Gujarati fallback and Hindi non-selectable state.
2. Test Light/Dark/System refresh and OS changes, forms/status/charts and no layout redesign.
3. Search amdavad, baroda, Satellite and localized names; test ambiguous alias and no-result behavior.
4. Run Gujarati + dark + mobile text-wrap checks.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 17 - Section 03: EMI Calculator, Gujarat Stamp Duty Calculator and Land Unit Converter

B17-S3A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 17 - SECTION S3: EMI Calculator, Gujarat Stamp Duty Calculator and Land Unit Converter

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_14\_DESIGN\_BATCH\_17\_ADVANCED\_PWA\_LOCALIZATION\_TOOLS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 17 - Advanced PWA Localization Tools (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement all three public tools using exact Batch 17 design and public shell.
2. EMI: validate Principal/rate/tenure, standard reducing-balance formula, zero-rate handling, Indian currency formatting and estimate disclaimer; loan-partner CTA shows Setup Required when missing.
3. Stamp Duty: use versioned/effective-date rule authority, exact design inputs/result breakdown, approved rounding and strong estimate/legal disclaimer; do not hard-code forever or guarantee official demand.
4. Unit Converter: canonical conversion factors, exact supported Gujarat units, region-specific warning for variable units, precision, Same Unit, Swap/Copy where shown and shared factor authority.
5. Add deterministic unit tests; do not store sensitive calculator inputs unnecessarily.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B17-S3B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 17 - SECTION S3: EMI Calculator, Gujarat Stamp Duty Calculator and Land Unit Converter

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_14\_DESIGN\_BATCH\_17\_ADVANCED\_PWA\_LOCALIZATION\_TOOLS\_FULL\_SPEC.md` and `Batch 17 - Advanced PWA Localization Tools (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Run known EMI cases including zero interest and invalid inputs; verify totals and Indian formatting.
2. Test two Stamp Duty rule versions/effective dates, boundaries and rounding.
3. Test Unit conversion forward/inverse/round-trip, decimal precision and regional warning.
4. Test provider missing partner state, disclaimers and mobile forms.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 17 - Section 04: Comparison - Tray and Full Table

B17-S4A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 17 - SECTION S4: Comparison - Tray and Full Table

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_14\_DESIGN\_BATCH\_17\_ADVANCED\_PWA\_LOCALIZATION\_TOOLS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 17 - Advanced PWA Localization Tools (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement Compare Tray after first add, persistent state across pagination/filter/navigation and maximum 4 final authority.
2. Attempt fifth item shows visible limit feedback instead of silent ignore.
3. Place mobile Tray above Dashboard bottom nav and respect safe area; public pages use safe bottom offset.
4. Implement Full Comparison with current public data revalidation, unavailable-item state, exact comparable rows, internal horizontal scroll and pinned attribute column.
5. Keep selection public-safe, entity-type identity stable, View Details and Noindex.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.

7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B17-S4B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 17 - SECTION S4: Comparison - Tray and Full Table

Do not trust the implementation report as proof. Open the running application and manually verify this section against 'BATCH_DOCUMENT_14_DESIGN_BATCH_17_ADVANCED_PWA_LOCALIZATION_TOOLS_FULL_SPEC.md' and 'Batch 17 - Advanced PWA Localization Tools (Standalone).html'. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Add items across Search pages/filters/Detail navigation and verify persistence.
2. Add 1-4 then attempt fifth and verify state unchanged plus message.
3. Unpublish/remove selected entity and verify safe unavailable state/no hidden data.
4. Test 390px Tray/bottom-nav collision and pinned-column internal scroll.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 17 - Section 05: Analytics Consent, PWA Update and Accessibility Quick Settings

B17-S5A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 17 - SECTION S5: Analytics Consent, PWA Update and Accessibility Quick Settings

Work only on this section now. Read the full specification file

'BATCH_DOCUMENT_14_DESIGN_BATCH_17_ADVANCED_PWA_LOCALIZATION_TOOLS_FULL_SPEC.md' for context and inspect the exact section screens/states in 'Batch 17 - Advanced PWA Localization Tools (Standalone).html'. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Implement first-choice Analytics Consent: desktop bottom-left prompt, mobile sheet, no tracking before choice and one state shared with Batch 16 Cookie Preferences.
2. Require Provider Active AND Analytics consent On before loading tracking; keep Marketing separate.
3. Implement real Service Worker waiting-update detection, non-blocking Toast deferred until idle and safe activation/reload without interrupting critical forms/payments or causing reload loops.
4. Implement exact Accessibility Quick Settings with persistent real effects, token-based text scaling/contrast where shown, Reduce Motion respecting OS preference, visible focus and isolated Reset.
5. Test interactions with Theme and Localization.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.

4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B17-S5B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 17 - SECTION S5: Analytics Consent, PWA Update and Accessibility Quick Settings

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_14\_DESIGN\_BATCH\_17\_ADVANCED\_PWA\_LOCALIZATION\_TOOLS\_FULL\_SPEC.md` and `Batch 17 - Advanced PWA Localization Tools (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Fresh Network test before consent; test provider/consent matrix and Footer revisit.
2. Simulate waiting Service Worker, active form/payment, update action and controller change with no reload loop.
3. Test accessibility settings persistence, large text no clipping, reduced motion, keyboard focus and Reset isolation.
4. Test Dark + Gujarati + accessibility combinations on mobile and desktop.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 17 - Section 06: Final Cross-Batch Consistency Checklist and Production UX QA

B17-S6A - IMPLEMENTATION PROMPT

IMPLEMENTATION PROMPT - DESIGN BATCH 17 - SECTION S6: Final Cross-Batch Consistency Checklist and Production UX QA

Work only on this section now. Read the full specification file

`BATCH\_DOCUMENT\_14\_DESIGN\_BATCH\_17\_ADVANCED\_PWA\_LOCALIZATION\_TOOLS\_FULL\_SPEC.md` for context and inspect the exact section screens/states in `Batch 17 - Advanced PWA Localization Tools (Standalone).html`. Do not jump to the next section until this section has passed its separate Manual Verification Prompt.

Before coding, inspect every current route/component/action/schema/RLS/provider dependency used by this section. Internally map preserve / replace / rebuild, then implement; do not stop at a plan.

SECTION SCOPE - ALL ITEMS ARE MANDATORY:

1. Run final global QA locks: public desktop 3-zone Header, public mobile Header/search/drawer, Dashboard Sidebar, exact mobile bottom nav, contextual Back Headers and Admin no-bottom-nav rule.
2. Verify Skeleton/Empty/Error states, Table->Card below 768 where designed, Modal->Sheet transformations and canonical status color grammar.
3. Verify Wizards desktop numbered rail/mobile progress, sticky footer, autosave/resume, duplicate-submit prevention, inline validation/error summaries.
4. Audit fake-data prohibition, Provider honesty, masked secrets, contact privacy, estimate disclaimers and translation fallback.

5. Run 390-first then 768/1280 plus smaller/larger widths: no accidental horizontal scroll, sticky overlap, unsafe keyboard coverage or sub-44px critical touch targets.
6. Run accessibility, reduced motion, Theme, localization, PWA, consent and all role regressions.

IMPLEMENTATION RULES:

1. Match the exact design structure and responsive transformation. Do not invent or retain conflicting old presentation.
2. Wire every visible control to real behavior and persistent data. Include loading, empty, filtered-empty, error, forbidden and Setup Required states that belong to this section.
3. Enforce server-side validation, auth, role/ownership/participant scope and RLS. Use safe explicit field projections; no select-all sensitive payloads.
4. Fix section-relevant pagination, N+1, stale-state, concurrency, transaction and idempotency problems rather than preserving them because current code already works in small fixtures.
5. Preserve cross-batch contracts. Do not create duplicate Lead, Message, Site Visit, Billing, Verification, Support, Report, Notification or Media systems.
6. Test real browser behavior on desktop, tablet and 390px mobile when this section has UI; run focused permission and failure-path tests.
7. Run lint, typecheck and production build after implementation unless the project has an explicitly documented equivalent command.

At the end return exactly the Section Implementation Report format from this PDF, then stop.

B17-S6B - MANUAL VERIFICATION PROMPT

MANUAL VERIFICATION PROMPT - DESIGN BATCH 17 - SECTION S6: Final Cross-Batch Consistency Checklist and Production UX QA

Do not trust the implementation report as proof. Open the running application and manually verify this section against `BATCH\_DOCUMENT\_14\_DESIGN\_BATCH\_17\_ADVANCED\_PWA\_LOCALIZATION\_TOOLS\_FULL\_SPEC.md` and `Batch 17 - Advanced PWA Localization Tools (Standalone).html`. Use real Development fixtures and inspect actual database/state changes, Browser Network payloads and permission failures.

MANDATORY VERIFICATION:

1. Execute representative Guest, Owner, Broker, Builder and Admin journeys across all previous Batches.
2. Inspect horizontal overflow, sticky collisions, mobile keyboard/safe area and text clipping at all target widths.
3. Run Network/privacy/provider checks for fake metrics, secrets, contact leakage and pre-consent tracking.
4. Run lint, typecheck, production build, automated tests and high-risk manual regressions; no final PASS with unresolved internal defects.

ALSO VERIFY FOR THIS SECTION:

1. Exact visible hierarchy, spacing, controls, badges, states and desktop/mobile transformations from the source design.
2. Every visible action works; no href="#", dead button or fake success.
3. Loading, empty, filtered-empty, error, forbidden and provider Setup Required/fallback states that apply.
4. Direct URL and direct Server Action/API attempts from wrong role/owner/participant fail server-side.
5. Sensitive data is absent from initial Client payload when not authorised. Private files and secrets are not publicly reachable.
6. Double click, repeat request and stale/concurrent update behavior do not create duplicate or contradictory state.
7. Test 390px first, then 768/1024/1280/1366 as relevant. Check text wrap, page overflow, sticky overlap, safe area, modal/sheet and mobile keyboard.
8. When a failure is found, fix it, rerun the focused test, then rerun lint/typecheck/build and recheck impacted shared surfaces.

Return exactly the Section Manual Verification Report format from this PDF. Final status may be PASS only when every mandatory item passes; external provider-only blockers may be BLOCKED only when the exact honest Setup Required/fallback UI itself passes.

Batch 17 - Integration Verification

BATCH 17 INTEGRATION VERIFICATION PROMPT

BATCH INTEGRATION VERIFICATION PROMPT - DESIGN BATCH 17: ADVANCED PWA, LOCALIZATION AND TOOLS

Run this only after every section in Batch 17 has individually passed its Implementation + Manual Verification cycle.

PASSED SECTION SET TO RECHECK TOGETHER:

S1 PWA Install Prompt and Offline Banner, S2 Language Selector, Theme and Transliteration-Tolerant Search, S3 EMI Calculator, Gujarat Stamp Duty Calculator and Land Unit Converter, S4 Comparison - Tray and Full Table, S5 Analytics Consent, PWA Update

and Accessibility Quick Settings, S6 Final Cross-Batch Consistency Checklist and Production UX QA

MANDATORY CROSS-SECTION FLOWS:

1. PWA lifecycle + offline safety
2. Language/Theme/Search integration
3. Calculator correctness
4. Compare persistence
5. Consent/provider matrix
6. Global cross-batch responsive/accessibility QA

Re-run representative happy paths, failure paths, permission/RLS denial, duplicate/stale/concurrent actions, provider missing states and responsive navigation across section boundaries. Confirm shared components do not regress earlier passed sections. Run lint, typecheck, production build and focused automated tests. Fix all internal defects and repeat the Batch integration test until PASS.

Return a concise Batch Integration Report with: sections rechecked, flows tested, bugs found, fixes, security/RLS result, performance/pagination result, provider blockers and final status PASS / FAIL / BLOCKED.

FINAL CROSS-BATCH PRODUCTION RECONCILIATION PROMPT

PROMPT - FINAL PRODUCTION RECONCILIATION

Run this only after every individual section and every Batch Integration Verification in this PDF has passed.

Perform a full production reconciliation of My Gujarat Property across Design Batches 5, 4, 6-17 in the locked dependency order. Do not trust prior reports; run representative browser flows and inspect actual database/provider behavior.

Mandatory final audit:

1. Design authority: no mixed old/new UI, hidden old components, invented shells or missing required screens/states.
2. End-to-end entity flow: Wizard -> moderation -> public Detail -> Enquiry/Lead -> Message/Site Visit -> role Dashboard -> Notification.
3. Requirement flow: Wizard -> moderation -> restricted Feed/Detail -> Proposal -> embedded Thread -> Lead/CRM outcome.
4. Billing flow: Pricing -> Checkout -> provider -> Webhook -> Payment -> Subscription -> Invoice -> Refund/Admin reconciliation.
5. Admin flow: Users/Staff/Moderation/Verification/Support/Billing/Ads/CMS/Locations/Audit/Security/Reports/Exports/Maker-Checker.
6. Content flow: Admin Draft -> approval/sign-off -> Publish -> public About/Legal/Blog -> SEO/canonical/sitemap/cache invalidation.
7. Privacy and security: contact masking/reveal, private documents, write-only secrets, role/ownership/participant RLS, direct URL/API denial and sensitive-access audit.
8. Performance: pagination/cursors, complete count queries, no first-100-as-complete logic, no material N+1, bounded operational/admin lists and efficient analytics aggregates.
9. Transaction/idempotency: duplicate Submit, moderation, Lead transitions, Site Visits, Webhooks, Subscription activation, Refund, Coupon redemption, bulk actions, Role Change, Exports and deletion orchestration.
10. Provider matrix: Media/R2/CDN, Maps, WhatsApp, SMS/OTP, Email, Payment, Analytics, Push, Error Tracking, Cron/Jobs. Missing services must show the exact honest fallback/Setup Required state.
11. Batch 17 final QA: PWA install/offline/update, Language/Theme/Search, calculators, Comparison, consent and accessibility.
12. Responsive/accessibility: 390px first, tablet, desktop, smaller/wider edges, no page overflow, clipping, sticky collision, keyboard obstruction, broken focus or missing modal/sheet behavior.
13. Run lint, typecheck, production build, automated tests and focused high-risk manual regressions.

Fix all internal defects and repeat impacted tests. External provider-only blockers may remain only when required fallback/Setup Required UI passes and the activation steps are listed explicitly.

Return FINAL PRODUCTION RECONCILIATION REPORT:

- Batches and section counts verified
- Cross-batch flows tested
- Bugs found and fixes
- RLS/privacy/security result
- Payment/webhook reconciliation result
- Pagination/N+1/performance result
- Provider readiness matrix
- Responsive/accessibility result
- Remaining external activation items
- Final status: PASS / FAIL / BLOCKED

FINAL OPERATOR CHECKLIST

- Keep all 14 exact specification files and matching design HTML sources available to Claude.
- Use the locked order 5 -> 4 -> 6 -> 7 -> 8 -> 9 -> 10 -> 11 -> 12 -> 13 -> 14 -> 15 -> 16 -> 17.
- Within each Batch, never skip a section and never merge Implementation + Verification into one message.
- Run Batch Integration Verification after all sections in that Batch pass.
- Do not accept Build PASS as manual QA. Test real browser behavior, data persistence, permissions, provider states and responsive design.
- After Batch 17 Integration passes, run the Final Cross-Batch Production Reconciliation Prompt.
